U. S. DEPARTMENT OF AGRICULTURE,
BUREAU OF ANIMAL INDUSTRY,
Washington, D. C., June 1, 1932.

TO BUREAU EMPLOYEES:

The following information respecting State requirements for livestock entering the various States was obtained by the bureau from accredited officials of each State. Persons desiring fuller information on the subject of State laws and regulations should communicate directly with those officials.

This issue supersedes Miscellaneous Circular 14, issued in February, 1924, and revised in 1928 and 1930.

J. R. MOHLER,
Chief of Bureau.

(II)

ALABAMA

Horses, mules, and asses.—Health certificate; and if exposed to glanders, mallein-test chart must accompany same. Designate each animal as mare, gelding, stallion, jack, jennet, horse mule, or mare mule. Horses, mules, or asses, in inactive tick-infested areas, or in free or active areas, insufficiently guarded, or which have been dipped at dipping stations in inactive tick-infested areas, can not be moved into or through Alabama. Horses, mules, or asses out of inactive tick areas can not pass through tick-infested or nondipping stockyards into Alabama. No ticky horses, mules, or asses shall be brought into the State.

Cattle.—Health certificate, including tuberculin test, for all breeding, dairy, feeding, and grazing cattle, including steers, is required. Breeding and dairy cattle may be retested within 90 days after arrival in Alabama.

No ticky cattle shall be brought into the State. Cattle from an area quarantined for splenetic fever must be accompanied by certificate of inspection and dipping. Cattle from counties where one or more herds are quarantined for tick infestation or exposure must be accompanied by Federal certificate. Cattle in inactive tick-infested areas or in insufficiently guarded free or active areas, or which have been dipped at dipping stations in inactive tick-infested areas, can not be moved into or through the State. Cattle from inactive tick areas can not pass through tick-infested or nondipping stockyards into Alabama.

No cattle or swine, intended for breeding purposes, that are infested with the Bang abortion bacillus, shall be brought into the State. Dairy and breeding cattle shall be tested by the tube agglutination test. Pregnant cows must not be tested within 4 months of date of delivery, nor shall the test be applied before 20 days after the calf is born.

Swine.—To ship or bring swine into Alabama for any purpose other than immediate slaughter, the

owner or shipper shall make an affidavit and send it to the State veterinarian, and attach a copy to the shipping bill. The affidavit shall contain the following statements: That said swine (giving breed, age, sex, color, and other markings) have been inoculated with a standard dose of Federal-standard anti-hog-cholera serum within 10 days of the time of shipment into Alabama, or have been inoculated with a standard dose of Federal-standard anti-hog-cholera serum and hog-cholera virus at least 21 days before shipment into Alabama.

All breeding, grazing, or feeding swine shall be tuberculin tested and free of tuberculosis before being moved into Alabama. A health certificate stating that said swine have been tuberculin tested within six months before the time of movement shall accompany the movement and a copy shall be sent to the State veterinarian.

The swine and crate or car shall be disinfected with a standard, federally permitted disinfectant at the time of loading or before they arrive in Alabama. For abortion disease, see cattle regulations.

Sheep.—Health certificate.

Dogs.—Health certificate stating that there has been no exposure to disease and that the dog has been given one or more injections of antirabies vaccine within six months before shipment. One copy of certificate must accompany shipment and one copy must be sent to the State veterinarian, Auburn.

Poultry.—Health certificate by a qualified veterinarian that the poultry have not been exposed to or infected with any contagious or infectious disease. All poultry shall have been tuberculin tested before being shipped into Alabama. They must also be tested for pullorum disease.

Who may inspect.—Any qualified veterinarian who is approved by his State veterinarian and by the United States Bureau of Animal Industry.

Official.—State veterinarian, Auburn, to whom copies of all certificates must be sent.

ALASKA

Horses, mules, and asses.—Inspection and health certificate showing animals to be free from contagious, infectious, and communicable diseases.

Cattle.—Inspection for all cattle and health certificate showing freedom from contagious, infectious, and

communicable diseases. Tuberculin test for feeding, breeding, and dairy cattle.

Sheep.—Inspection and health certificate.

Swine.—Inspection and health certificate and serum treatment for hog cholera within two weeks before shipping.

Foxes.—Inspection of all foxes and health certificate showing freedom from contagious, infectious, and communicable diseases.

Who may inspect.—Inspectors of the United States Bureau of Animal Industry and legally qualified veterinarians of the State of origin authorized by the State and approved by the bureau.

Official.—Secretary for the Territory of Alaska, Juneau.

ARIZONA

Permit necessary.—No animals, household pets excepted, shall be shipped or moved into the State of Arizona without a permit from the State veterinarian in addition to the proper health certificates as outlined below. In writing or wiring for permits give consignor, consignee, point of origin, and destination of shipment.

Horses, mules, and asses.—Health certificate by an authorized veterinarian stating freedom from infectious and contagious diseases or exposure thereto.

Cattle.—Dairy and breeding cattle, health certificate, including tuberculin test within past 30 days (intradermic accepted) by an authorized veterinarian. Breeding and dairy cattle shall be held in quarantine for 60 days after date of arrival for retest, the retest to be made at the owner's expense.

Range cattle must be accompanied by a health certificate by an authorized veterinarian stating that they are free from scabies or exposure thereto for a period of six months before shipment.

No cattle that have been exposed to scabies may be shipped into Arizona unless they are accompanied by a certificate from a United States Bureau of Animal Industry inspector stating that they have been dipped twice in a permitted dip, 10 to 14 days apart, under his supervision.

Range bulls must be accompanied by a health certificate by an authorized veterinarian stating that they are free from scabies or exposure thereto for a period of six months before shipment and were tuberculin tested within 30 days prior to shipment.

No dairy cattle shall be imported into the State unless they have successfully passed a recognized, negative, agglutination blood test for Bang's disease within 30 days before date of importation.

Swine.—All swine imported into the State of Arizona must be accompanied by a health certificate showing that they are free from infectious, contagious, and communicable diseases, or exposure thereto, certifying that they have originated in a locality free from disease for a period of 90 days prior to shipment; otherwise certificate must show that they have been immunized by double treatment for hog cholera at point of origin and not loaded for a period of 21 days after such immunization. Hogs for immediate slaughter may enter the State if accompanied by a health certificate by an authorized veterinarian.

Hog-cholera virus.—All serum manufacturers and dealers are hereby prohibited from shipping any virulent blood or hog-cholera virus into the State of Arizona without the permission of the State veterinarian.

Sheep.—Health certificate showing them to be free from contagious, infectious, and communicable diseases by an authorized veterinarian and dated not more than 10 days prior to loading.

Goats.—For range goats, a health certificate by an authorized veterinarian.

For milk goats, a health certificate by an authorized veterinarian, including laboratory test for Malta fever by a recognized laboratory.

Dogs.—All dogs imported into the State of Arizona must be accompanied by a health certificate by an authorized veterinarian, certificate to include a statement to the effect that no rabies has existed for a period of six months at point of origin or that the animal has been immunized.

Health certificates.—All certificates of health must be made within 30 days of date of animals' entering State. They must be in quadruplicate, the original sent to the chief of the Bureau of Animal Industry at Washington, duplicate attached to waybill, triplicate sent to State veterinarian of State of origin of shipment, and the quadruplicate sent to the State veterinarian at Phoenix.

Who may inspect.—Federal veterinarians, State veterinarians, assistant State veterinarians, and other veterinarians authorized to make tests and inspections

for interstate shipments by the livestock authorities of the State in which they reside.

Official.—State veterinarian, Phoenix.

ARKANSAS

Horses, mules, and asses.—Horses, mules, and asses from inactive, tick-quarantined area shall be dipped in a standard arsenical solution under the supervision of the livestock sanitary official of the State of origin or an inspector of the United States Bureau of Animal Industry and must be free of ticks at the time of dipping.

Cattle.—Dairy and breeding cattle brought into the State shall have passed a negative intradermic or subcutaneous tuberculin test applied by an accredited, approved, Federal or State veterinarian. At the discretion of the State veterinarian such animals may be retested at the owner's expense by a veterinarian approved by the State veterinarian.

All female cattle, including calves six months old or more, except those for immediate slaughter, shall pass a negative blood test for contagious abortion (agglutination or complement fixation), made by a Federal, State, or competent commercial laboratory, not more than three weeks prior to shipment into the State.

Each animal shall be ear-tagged or otherwise permanently marked for identification, and the health certificate must show the date of the test and the name of the laboratory making the test. The original report from the testing laboratory must be attached to the copy of the health certificate sent to the State veterinarian by the veterinarian who issues the health certificate.

Swine.—All hogs except for immediate slaughter shall be accompanied by a health certificate showing the administration of serum and virus by a Federal, State, approved, or accredited veterinarian.

Sheep.—Sheep entering the State shall be healthy and, when from quarantined areas, must have a Federal certificate.

Who may inspect.—Veterinary inspectors of the United States Bureau of Animal Industry or official graduate veterinarians of the State of origin.

Official.—State veterinarian, Old State House, Little Rock.

CALIFORNIA

Horses, mules, and asses.—Health certificate. In lieu of health certificate, horses, mules, and asses may be brought into California when accompanied by signed statement of State veterinarian or other livestock sanitary authority stating that each animal in the shipment is free from and has not recently been exposed to any communicable disease.

Cattle.—Health certificate, including tuberculin test for dairy and breeding cattle. All cattle shipments to be made in accordance with Federal interstate regulations.

Dairy and breeding cattle are subject to retest within 90 days after their arrival. Cattle shipments destined to control, modified-accredited, or tuberculosis-eradication areas must conform to special Federal-State regulations governing the eradication of tuberculosis. Shippers should make inquiry if in doubt concerning such movements.

Transportation companies before accepting cattle for shipment to California should ascertain if any special regulations are in effect governing the shipment of cattle from States where cattle scab is known to exist.

Sheep and goats.—In accordance with Federal regulations. Persons contemplating such shipments must comply with the following:

Any person or persons desiring to ship buck sheep into the State of California shall notify the department of agriculture of the State of California by registered mail before said importation shall be made; the notice shall give the names and addresses of consignor and consignee, the number of animals shipped, and the origin and destination of the shipment. If the bucks are not shipped in crates or in railroad cars which have been cleaned and disinfected prior to loading, or if they have been unloaded in corrals while en route to destination, they may be dipped one or more times by a duly authorized agent of the State department of agriculture.

Any person or persons desiring to transport sheep or goats into the State of California, except sheep or goats for immediate slaughter, shall notify the State department of agriculture by registered mail before the importation shall be made, which notice shall include the names and addresses of the consignor and consignee, the owner of the sheep or goats, the place

of entrance into the State, and such description of the destination as will enable a duly authorized agent of the department of agriculture to locate readily the sheep or goats on their arrival.

Swine.—From public stockyards in accordance with Federal regulations.—Hog shipments originating in districts where hog cholera has existed within three months must be accompanied by a certificate from a licensed veterinarian stating that the entire number of hogs in the shipment is not affected with or exposed to cholera or other infectious disease.

Exemptions.—Animals accompanying immigrant outfits are exempt from all inspection requirements. Animals for theatrical or exhibition purposes are exempt from general inspection requirements, provided they do not remain in California.

Who may inspect.—Any qualified veterinarian who is a graduate of a duly recognized and accredited veterinary college.

Official.—Chief, division of animal industry, State department of agriculture, Sacramento.

COLORADO

Horses, mules, and asses.—Must be accompanied by bill of health showing them to be free from all contagious or infectious diseases, and any stallion or jack for breeding purposes must be accompanied by a certificate that he is not a ridgeling and is not deformed or afflicted with any of the diseases or unsoundnesses known as roaring, ringbone, chorea (St. Vitus's dance), crampiness, shivering, stringhalt, bone spavin, bog spavin, specific ophthalmia (moon blindness), curb (when accompanied by curby conformation), or any form of venereal or other contagious disease; the bill of health and certificate to be issued by a licensed graduate veterinarian who is authorized by the sanitary authorities of the State of origin to inspect livestock for interstate shipment, or by a Federal veterinarian. *Except* that such shipments as are made to or through the Denver Union Stockyards, where Federal inspection is maintained, do not require a bill of health provided the waybills are indorsed "Subject to health inspection at Denver."

Cattle.—All bulls and pedigreed female cattle and any farm-raised, gentle, female cattle and any female cattle intended for dairy purposes must be accompanied by a bill of health and tuberculin-test chart

showing freedom from tuberculosis. Either the intradermic or subcutaneous test will be accepted when made in full compliance with the Federal rules for making such tests. Cattle from Federal-State accredited herds and from areas officially declared to be modified accredited areas may be brought into Colorado if accompanied by a health certificate reciting that the cattle are from such herds or areas and giving the date of last test, which must not be more than 12 months before shipment.

Swine.—For purposes other than immediate slaughter must be accompanied by the affidavit of the owner or shipper that the animals have not been exposed to the infection of hog cholera, must be shipped in clean and disinfected cars, and not unloaded in public stockyards en route.

Sheep.—In compliance with the regulations of the United States Department of Agriculture.

Who may inspect.—Inspections and tests to be made in all cases by a licensed graduate veterinarian authorized by the sanitary authorities of the State of origin or by a Federal veterinarian.

Official.—State veterinary surgeon, Denver.

CONNECTICUT

Horses, mules, and asses.—Permit, health certificate, or ophthalmic mallein test. This does not refer to horses for races or exhibition.

Cattle.—Cattle will not be released from quarantine unless certified to be from accredited or clean herds under State and Federal supervision. A retest will be required in 60 days unless they conform with above. Cattle will not be approved for addition to herds under State and Federal supervision unless certified as from herds under State and Federal supervision.

No dairy or breeding cattle that have given a positive or suspicious reaction to any blood test for Bang's abortion disease or are known to be infected with said disease shall be imported. Permit for all cattle for slaughter subject to ear-tag identification before shipment and veterinary inspection at time of slaughter.

Swine.—Permit and health certificate, including certificate of serum inoculation. Hogs for slaughter subject to veterinary inspection at time of slaughter.

Sheep.—No restrictions.

Poultry.—For slaughter, permit and veterinary inspection on arrival at expense of consignee. No restrictions on poultry for breeding and utility.

Who may inspect.—Commissioner or his agent.

Official.—Commissioner on domestic animals, State Office Building, Hartford.

DELAWARE

Horses, mules, and asses.—Must be free from infectious and contagious diseases.

Cattle.—All cattle, except for immediate slaughter, must be accompanied by a health certificate and tuberculin-test chart approved by the proper livestock sanitary official of the State from which the cattle are brought, and a copy of this health certificate and tuberculin-test chart must be forwarded to the State board of agriculture, Dover, so as to reach that department before the arrival of the cattle at destination.

If cattle are from accredited herds, tuberculin test must have been applied within 12 months previous to shipment. If from modified accredited areas, tuberculin test must have been applied within six months previous to shipment and cattle must have originated in herds in which no reactors were found on last test. If from herds in the process of accreditation, tuberculin test must have been applied within three months previous to shipment and cattle must have originated in herds in which no reactors were found on the last test. Cattle in any of these classifications that have not been tested within the time limits herein specified must be retested prior to shipment into Delaware.

Cattle that have passed through a public stockyards or sale stable must be quarantined from 60 to 90 days at destination and retested at owner's expense.

Steers for feeding or grazing purposes may be shipped into State when accompanied by a tuberculin-test chart showing that the animals have passed a clean test within three months of shipment.

No cattle may be shipped into Delaware for immediate slaughter except when consigned to recognized slaughter centers where Federal inspection is maintained or to slaughterhouses operating under a State board of health permit.

Tuberculin-test chart must show test to have been made by the subcutaneous or intradermic method in conformity with the requirements of the United States Bureau of Animal Industry, and the identity of each grade animal must be indicated by a securely attached official tag of the State of origin and by descriptions

shown on the chart. (Tags will not be required for purebred animals, but registration numbers and descriptions must be given.)

Swine.—Must be free from infectious and contagious diseases.

Sheep.—Must be free from infectious and contagious diseases.

Who may inspect.—Any veterinarian approved by the livestock sanitary official of the State in which the shipment originates.

Official.—Secretary, State board of agriculture, Dover.

DISTRICT OF COLUMBIA

Horses, mules, and asses.—No restrictions.

Cattle.—Except for cattle for immediate slaughter, certificate of tuberculin test by a veterinary inspector of the United States Bureau of Animal Industry or an official veterinarian of the health department of the District of Columbia or of the State from which the animal is brought. Said certificate must show the place and the date of test and be issued within 30 days of date of entry, also temperature chart, description of the animal or animals, age, markings, and tag numbers, if tagged.

Cattle for immediate slaughter may enter the District of Columbia without the tuberculin test, but must be accompanied by a permit as indicated above and tagged by an official of the United States Bureau of Animal Industry or of the District of Columbia before entry, except that cattle under six months old, castrated cattle, and cattle shipped in cars consigned to an establishment having United States meat inspection may enter the District of Columbia for immediate slaughter without permit or tagging.

Swine.—No restrictions.

Sheep.—No restrictions.

Officials.—Chief of the Bureau of Animal Industry, Washington; health officer, Washington.

FLORIDA

Horses, mules, and asses.—Horses, mules, and asses from areas quarantined on account of splenic or tick fever must be accompanied by a United States Bureau of Animal Industry certificate of inspection or dipping.

Cattle.—Cattle from areas quarantined on account of splenetic or tick fever must be accompanied by a bureau certificate of inspection or dipping.

Except as hereinafter provided, all cattle, including calves, shipped or driven into the State of Florida must be accompanied by an official health certificate, including a tuberculin-test record, accomplished within 60 days prior to the date of shipment.

Dairy and breeding cattle originating directly from accredited herds or from accredited areas of the several States or the District of Columbia will be accepted when accompanied by a properly executed and officially approved tuberculin-test record.

Dairy and breeding cattle, including calves, originating from nonaccredited herds or from nonaccredited areas of the several States or the District of Columbia and consigned to Florida points will be quarantined at destination at the owner's expense and held subject to an approved retest with tuberculin within 60 days, unless special and written permission has been obtained in advance for said particular shipment.

Strictly range cattle (not including bulls, heifers, and milk cows) are admitted without tuberculin test on approval of State veterinarian.

Cattle for immediate slaughter are admitted without tuberculin test if consigned to the following-named establishments, which are approved for the receipt of cattle for immediate slaughter: National Stock Yards, Farris Packing Co., Jones-Chambliss Co., Jacksonville, Fla.

All dairy or breeding cattle, including calves six months or more of age, shall pass a negative blood test for infectious abortion, made by a laboratory recognized by the livestock sanitary officials of State of origin, the test to be made not more than three weeks prior to movement into the State of Florida. Each animal must be ear-tagged or otherwise permanently marked for the purpose of identification, and the health certificate must show the date of the test; the name of the laboratory must be given.

Swine.—Hogs, except for immediate slaughter, health certificate showing the animals to have been immunized with serum alone within 14 days or with serum and virus not less than 21 days prior to shipment. Hogs for immediate slaughter must be consigned to the establishments as approved for "Immediate slaughter" cattle.

Sheep and goats.—In accordance with Federal regulations.

Who may inspect.—Federal and State veterinarians, and other veterinarians authorized by the proper official of the State of origin and approved by the United States Bureau of Animal Industry.

Official.—State veterinarian, Capitol Building, Tallahassee.

GEORGIA

Horses, mules, and asses.—None except shipments or movements from tick-infested and quarantined areas, in which event all movements must be made under Federal inspection, supervision, and disinfection.

Cattle.—All cattle shipped or driven into the State must be accompanied by a health certificate, including tuberculin-test record, and on order of proper State official are subject to retest in from 30 to 60 days after arrival in the State. The intradermic tuberculin test of cattle destined to points in Georgia will be acceptable only when conducted by veterinarians accredited by the State of origin and the United States Bureau of Animal Industry. A statement showing such accreditation must be made on the face of the health certificate. Any cattle not accompanied by a certificate as described above must be held at the State line until inspected and certified to by the State veterinarian of Georgia or his duly accredited deputy, the expense of the inspection to be paid by the owner of the cattle.

All breeding cattle, including calves 6 months old or more, shall pass a negative blood test for contagious abortion (agglutination or complement-fixation) made by a Federal, State, or competent commercial laboratory, not more than three weeks prior to shipment into the State of Georgia. Each animal shall be ear-tagged or otherwise permanently marked for identification, and the health certificate must show the date of the test and the name of the laboratory making the test. The original report from the testing laboratory must be attached to the copy of the health certificate sent to the State veterinarian of Georgia by the veterinarian who issues the health certificate.

Cattle moving in violation of these requirements will be quarantined and tested at the owner's expense, and any reactors will be tagged or branded for identification and quarantined on the owner's premises. Violators of quarantine regulations will be prosecuted for a misdemeanor.

All cattle, horses, mules, sheep, and goats destined to or moving through Georgia must be free of ticks.

Swine.—If shipped to recognized slaughtering centers for immediate slaughter, cars must be placarded "Exposed to hog cholera."

Hogs may not be reshipped from stockyards to farms unless they are first immunized.

Breeding hogs must be immunized by the serum-alone method not more than 14 days prior to shipment, or with serum and virus at least 21 days before shipment into Georgia, and hogs and crates or cars must be disinfected in a 2 per cent cresylic acid compound solution prior to shipment. Shipments must be accompanied by an affidavit by the owner, copy of which shall be sent to the State veterinarian direct. The form of affidavit may be obtained by applying to the official named below.

Sheep and goats.—In accordance with Federal regulations.

Poultry.—All chickens 4 months of age and over, for purposes other than immediate slaughter, shall pass the standard intradermic tuberculin test within 30 days of date of movement into the State. Each chicken shall be identified by a sealed, numbered leg band and the health certificate must show the number of band and the date of testing. The health certificate must be issued in duplicate, the duplicate to accompany shipment to destination and the original forwarded to the State veterinarian. All tuberculin tests must be conducted by a graduate veterinarian approved by the proper livestock sanitary officials of the State of origin.

The requirements of this regulation shall not apply to chickens originating in flocks designated by proper Federal and State authorities as tuberculosis-free accredited flocks.

Who may inspect.—Federal veterinarians, State veterinarians, or properly qualified deputies.

Official.—State veterinarian, 314 State Capitol, Atlanta.

HAWAII

Livestock from the mainland of the United States are subject to the regulations of the United States Department of Agriculture governing the humane handling and safe transport of livestock in interstate trade, and permit must be obtained for each shipment from the proper Federal official at the port of shipment.

Honolulu is made the only port of entry for animals subject to quarantine.

Horses, mules, and asses.—Health certificate stating that the animals are free from any disease contagious to horse stock.

Certificate showing that the animals have been mallein tested within two weeks, which certificate shall give a description of each animal (tail tag number or other marks of identification) and name and address of the consignee in Hawaii.

Cattle.—All cattle must be accompanied by a health certificate, including a chart showing that they have passed a satisfactory tuberculin test within 30 days from the date of shipment.

The tuberculin test is not required for cattle from an accredited herd accompanied by a certificate showing that they are from such herd.

All cattle of breeding age must be accompanied by a certificate showing that they have within 30 days passed a negative agglutination or complement-fixation test for contagious abortion.

Swine.—Swine for breeding purposes, except suckling pigs, shall be accompanied by (1) a certificate showing that they have been given the simultaneous treatment for hog cholera not later than 30 days before shipment; (2) an affidavit by the owner or importer showing that the certificate refers to the swine in question and that they have come from premises on which no hog cholera or swine plague has existed for a period of six months immediately preceding the date of shipment; and (3) a certificate issued by a veterinary officer of the United States Bureau of Animal Industry showing that just prior to embarkation said swine had been dipped or sprayed in a 3 per cent cresol solution under his direction.

No swine imported for the purpose of slaughter shall be allowed entry into the Territory of Hawaii unless they (1) have been subjected to serum alone (or single treatment) for hog cholera within 10 days previous to shipment; (2) have come from premises on which no hog cholera or swine plague has existed for a period of six months immediately preceding the date of shipment; and (3) have successfully passed a careful veterinary inspection for freedom of any indication of disease.

No swine imported for the purpose of slaughter shall be allowed entry into the Territory of Hawaii unless they are accompanied by (1) a certificate, issued or

approved by a veterinary officer of the United States Bureau of Animal Industry or by the State veterinarian for the State where such swine originate, showing that the requirements of the preceding paragraph have been fulfilled; (2) an affidavit, sworn to by the owner or importer, showing that the certificate required above refers to the swine in question and that the same have been shipped from the premises mentioned in said certificate in clean and disinfected cars to the port of embarkation; and (3) a certificate, issued by a veterinary officer of the United States Bureau of Animal Industry, showing that just prior to embarkation said swine had been dipped or sprayed in a 3 per cent cresol solution under the direction of said veterinary officer.

All swine imported into the Territory of Hawaii for the purpose of slaughter must bear a numbered ear tag, a list of which numbers will be furnished the Territorial veterinarian upon arrival of swine. Upon slaughter these ear tags will be recovered by the inspecting official and sent to the office of the Territorial veterinarian.

Sheep and goats.—Sheep must be accompanied by a health certificate showing that the animals are free from sheep scab and have been shipped in accordance with the regulations of the United States Bureau of Animal Industry governing the transportation of livestock in interstate trade.

Goats must be accompanied by a health certificate stating that the animals have been given a careful veterinarian examination and are apparently free from infectious and contagious diseases.

Dogs and cats.—All dogs and cats imported into the Territory of Hawaii coming from or through any country, State, or Territory not officially declared free from rabies shall be kept in quarantine, on premises provided by the board, for a period of 120 days, or for such longer period, not to exceed 180 days, counting from the date the said dog or cat is received at the quarantine station in Honolulu as, in the judgment of the Territorial veterinarian, shall be necessary.

The port of Honolulu shall constitute the only port through which dogs and cats may enter the Territory. Dogs and cats arriving at any other port must be kept confined on board until arrival at Honolulu, or must depart with the vessel when it leaves the Territory.

Dogs and cats accompanying tourist or temporary visitors shall be quarantined until the departure of the tourist or visitor, at which time the animals will be delivered on board ship by the inspecting officer.

All expenses connected with the quarantining, feeding, handling, and treatment of dogs and cats shall be borne by the owner, importer, agent, keeper, or consignee, and no dog or cat will be released from quarantine until all such expenses have been paid.

Dogs and cats arriving in the Territory of Hawaii and coming from countries, States, or Territories officially declared free from rabies may be admitted without quarantine if they are accompanied by a certificate of health issued by a qualified veterinarian to the effect that the animals in question are in good health and are apparently free from diseases contagious to the canine or feline species. All such dogs and cats must also be accompanied by an affidavit from the captain of the ship stating that said dogs and cats have not been allowed ashore at any port en route.

Who may inspect.—Veterinary inspectors of the United States Bureau of Animal Industry and the State veterinarian of the State of origin, or duly qualified veterinarians whose certificates must be approved by one of the foregoing officials.

Official.—Territorial veterinarian, Honolulu.

IDAHO

Horses, mules, and asses.—Mallein test, applied by a State-approved graduate or Federal veterinarian, not to exceed 30 days prior to shipment.

Horses for temporary exhibition or racing purposes, a clinical health certificate issued by a State-approved graduate or Federal veterinarian.

Mallein-test certificates covering stallions and jacks must show any malformations or defects.

Cattle.—Intradermic tuberculin test, applied by a State approved or Federal veterinarian, not to exceed 30 days prior to shipment, on all dairy and breeding cattle. Right reserved to hold cattle in quarantine at the destination and retest after 60 days at State expense, no indemnity allowed.

Cattle from accredited herds admitted on certificate from authorized State or Federal official showing the accredited certificate number with copy of last test chart, if tested not to exceed six months prior to date of shipment, one copy of said health certificate to be furnished the Idaho bureau of animal industry, Boise.

The health certificate covering dairy or breeding cattle shall certify that no animal in the shipment has shown a positive or suspicious reaction to the blood agglutination test for infectious abortion. No cattle which have reacted to this test shall be shipped into Idaho.

All shipments of cattle originating in any other State billed "feed in transit" to a point in Idaho must be handled in accordance with the State regulations governing the admission of dairy and breeding cattle.

Cattle for immediate slaughter admitted on marked waybills to the following slaughtering points without certificate: Boise, Bonners Ferry, Lewiston, Moscow, Sandpoint, and Wallace.

Steers, range cattle, and semirange cattle of recognized beef type may enter the State for temporary feeding purposes under special quarantine and be confined separately from other cattle on such premises as may be designated in the order of special quarantine.

Swine.—Swine for feeding and breeding purposes from noninfected districts admitted on health certificates from authorized graduate State or Federal veterinarian, certifying that animals were loaded through clean and disinfected chutes and into clean and disinfected cars, or by express in crates.

Swine from infected districts must be immunized by simultaneous method by authorized graduate State or Federal veterinarian in accordance with bureau regulations, the animals dipped and not loaded earlier than 21 days after treatment. When immunized by serum alone, animals must be dipped and shipped not later than 15 days after receiving treatment.

Purebred swine are admitted when shipped in crates, on owner's affidavit or form furnished by the Idaho bureau of animal industry, Boise.

Serum and virus shipments into the State are allowed only on permit from the State bureau, Boise.

(Forms of affidavits for purebred swine may be obtained from the director of animal industry, Boise.)

Dogs.—All dogs entering the State of Idaho must be accompanied by official health certificate certifying that the animal has not been exposed to any infectious, contagious, or communicable disease, and that rabies has not existed in the district for the past six months.

All dogs entering the State of Idaho from districts where rabies exists or has existed within the past six months must be accompanied by official health certificate certifying that the animal has been immunized against rabies infection.

Poultry.—All hatching eggs, baby chicks, growing and breeding stock, transported or otherwise moved into the State of Idaho, must be accompanied by an official health certificate showing freedom from white diarrhea (pullorum disease) infection.

All hatching eggs, baby chicks, and growing stock shall have come from parent stock which has been found free from bacillary white diarrhea by the application of the agglutination test within 12 months immediately prior to the breeding season during which the stock being transported or moved was produced. The stock to be used for breeding purposes must have been tested by the agglutination method within the 12 months prior to importation and found free from bacillary white diarrhea.

Official.—Director of animal industry, Boise.

Sheep and goats.—At least two days' notice in writing from owner or shipper of intentions to enter the State, stating the time and place of entry and final destination. Health certificate issued at the time of shipment, by Federal or State inspector, for all sheep and goats for feeding and breeding purposes showing such sheep and goats to be free from symptoms of any contagious, infectious, or communicable disease and to have originated in areas where scabies has not existed for 12 months next preceding date offered for transportation.

Animals must be shipped in clean and disinfected cars in accordance with the Federal regulations governing interstate movements of livestock. Sheep driven into the State on foot from any other State shall be inspected and certified before they are driven two miles within the State boundary. A duplicate of the certificate must be mailed to the official named below.

All bucks coming into the State from quarantined territory shall be dipped twice, under supervision of the inspector of the United States Bureau of Animal Industry, inspector in charge of the board of sheep commissioners, or his agents. All bucks coming from clean territory shall be dipped once at the discretion of the board of sheep commissioners, the dipping to be approved by the State board or its inspector in

charge. Sheep infected with or exposed to scabies must be dipped in a lime-sulphur solution within 10 to 14 days prior to shipment under State or Federal supervision and may be loaded only in clean and disinfected cars.

Purebred sheep and goats may be brought in for exhibition purposes when accompanied by an affidavit of the owner.

(Forms of affidavits mentioned in these requirements may be obtained from the office named below.)

Official.—Board of sheep commissioners, Boise.

ILLINOIS

Horses, mules, and asses.—All horses, mules, and asses imported into the State of Illinois must be accompanied by a certificate of health, showing the animals to be free from contagious and infectious diseases, and including mallein test conducted within 60 days prior to date of shipment.

Horses and mules consigned to public stockyards, markets, or for immediate slaughter may be admitted without restriction.

Cattle.—All cattle shipped into Illinois or from public stockyards in the State except as herein otherwise provided (unless consigned to and delivered in the Union Stockyards, Chicago, the National Stockyards, East St. Louis, the Union Stockyards, Peoria, or other public stockyards) must be accompanied by a certificate of health including the tuberculin test administered within 30 days and the animals shall be held in quarantine for retest in not less than 60 days after arrival.

Cattle from State and Federal accredited herds and modified accredited areas may be shipped into the State of Illinois when accompanied by a certificate issued by an authorized State or Federal inspector showing such cattle to have originated in an accredited herd or a modified accredited area; the cattle shall not be subject to quarantine and retest.

Steers and female cattle of the beef breeds for feeding or grazing purposes may be shipped into the State without a tuberculin test and be held in quarantine until released by the State department of agriculture. Transportation companies shall report to the department the delivery of such cattle within 24 hours after their delivery within the State, except such cattle as are delivered to public stockyards within

the State or are shipped from public stockyards within the State. Female cattle of the beef breeds for feeding or grazing purposes must be branded with the letter "F" on the right jaw, the letter to be not less than 2 nor more than 3 inches in length, or if cattle are marked in stockyards within the State of Illinois they may be marked by branding or with nonremovable ear tag to be furnished by the State department of agriculture.

All cattle may be shipped for immediate slaughter without a tuberculin test. The cattle, however, shall be held in quarantine until slaughtered.

All certificates of health shall be issued in duplicate form by veterinarians in good standing and shall be approved by the State veterinarian or official in charge of livestock sanitary control in the State in which the shipment has its origin, or by an inspector of the United States Department of Agriculture. Before accepting consignment of cattle for importation into the State of Illinois, transportation companies shall require that the original of said certificate of health be delivered to them to be attached to the waybill and accompany the shipment to its destination. When cattle are driven, moved by truck, or otherwise transported into the State of Illinois the certificate of health must be carried by the person in charge of the cattle. A duplicate of each certificate of health under which cattle are brought into the State of Illinois for breeding or dairy purposes as in this act required shall be mailed to the State department of agriculture on or before the date of bringing the cattle into the State. Furthermore, the agent of any transportation company delivering cattle covered by a certificate of health within the State of Illinois shall immediately detach from the waybill the certificate of health and immediately forward it to the State department of agriculture, and the transportation company may require with each shipment an extra duplicate to be filed with the transportation company for record.

All cattle for exhibition within the State of Illinois must be accompanied by a certificate of health, issued and indorsed by the authorities of the State from which the exhibited animals originated, that the animals are free from tuberculosis as shown by a tuberculin test made within 90 days prior to the date of exhibition, unless the animal comes from a Federal or a State accredited herd or accredited area. Owners

must furnish all water pails for watering cattle, as, for sanitary reasons, all watering troughs will be removed.

Except as otherwise provided, all dairy and breeding cattle more than 4 months old brought into Illinois or shipped from public stockyards within the State shall be accompanied by a certificate approved by the livestock sanitary officials of the State of origin showing the cattle to have passed a negative agglutination blood test for infectious abortion or Bang's disease within 30 days prior to entry into the State. Tests will not be accepted if conducted within 15 days after the animals have calved.

Dairy and breeding cattle consigned to public stockyards within the State may enter without test.

Dairy and breeding cattle from Bang abortion-free accredited herds may enter without test when accompanied by a certificate issued by the livestock sanitary officials of the State of origin showing such cattle to have originated in such herd.

Dairy and breeding cattle consigned to public sales within the State may enter without test, but such cattle as remain within the State shall be immediately subjected to the test.

Cattle for feeding and grazing purposes only may enter the State or be shipped from public stockyards within the State without test, but shall be held in quarantine during the feeding and grazing period.

Swine.—1. Hogs shipped from public stockyards must be covered by a permit and shipped after immunization by either the single or double method administered by a representative of the United States Bureau of Animal Industry or the State department of agriculture, and held under quarantine for 21 days after arrival, during which time weekly reports of their condition must be rendered to the State sanitary veterinary inspector, division of animal industry, Springfield.

2. Hogs for feeding or breeding purposes not originating in or coming through public stockyards will be admitted:

(a) On permit from the State sanitary veterinary inspector when accompanied by a certificate of health issued by recognized State or Federal official of State of origin. Copy of permit shall accompany the hogs; if shipment, it shall be attached to the waybill. The hogs are to be immunized on arrival and held under quarantine for 21 days after immunization if by the

double treatment. In case of immunization by the single treatment, quarantine is removed. Owners of the hogs shall make weekly reports as to their condition to the State sanitary veterinary inspector until quarantine is removed.

(b) When accompanied by certificate of recognized State or Federal official of State of origin, which certificate shows that the hogs have been immunized by the simultaneous treatment more than 21 days prior to the date of shipment. Hogs treated by the simultaneous treatment shall be held for a period of 21 days after treatment before they are eligible to be admitted to the State.

3. All hogs for exhibition purposes must be accompanied by certificate of health issued by a licensed veterinarian. Such hogs must be accompanied by affidavit that they have been immunized by either the single or the double treatment. If the single method is used, it must have been administered within 30 days prior to the date of movement. If the double method is used it must have been administered more than 30 days prior to the date of movement.

4. Transportation companies, before accepting shipments of hogs into Illinois, shall require certificates of health to be executed in duplicate form. The original of such certificate shall be attached to the waybill, and the veterinarian issuing such certificate of health shall immediately forward duplicate of such certificate to the State sanitary veterinary inspector, Springfield.

Sheep.—Health certificate, except for immediate slaughter, showing that the animals have been inspected and dipped under State or Federal supervision not more than 15 days prior to importation, unless climatic conditions prevent, and found free from all contagious, infectious, or communicable diseases.

Dogs.—Dogs brought into the State must be accompanied by a certificate of health issued by the livestock disease control official or his duly authorized representative of the State in which the shipment originated stating that the animal or animals are free from communicable disease, performing dogs kept under direct control during stay in the State exempted.

Who may inspect.—State veterinarians and their assistants and inspectors of the United States Bureau of Animal Industry.

Official.—Chief veterinarian; superintendent, division of animal industry, department of agriculture, Springfield.

INDIANA

Horses, mules, and asses.—None except that stallions and jacks are subject to requirements of the Indiana stallion-enrollment board.

Cattle.—Breeding and/or dairy cattle, or cattle intended for such purposes, offered for shipment into Indiana, shall be accompanied by a health certificate issued or approved by the State veterinarian, or the Federal veterinarian in charge of bovine tuberculosis eradication in the State of origin, indicating that said cattle originated in a modified accredited area, or accredited herd, as shown by the records on file in the office of the State veterinarian or the office of the United States Bureau of Animal Industry in said State, and have passed a negative tuberculin test applied by a veterinary inspector regularly employed by the State or Federal Government, or by an accredited veterinarian, within a period of one year immediately preceding the date on which they are shipped; all such cattle to be identified by registration name and number or by tag number: *Provided*, That calves under three months of age, nursing dams which meet these requirements, may accompany the dams without a tuberculin test.

Breeding and/or dairy cattle, or cattle intended to be used for breeding and/or dairy purposes, which do not meet the above requirements when offered for shipment into Indiana, shall meet Federal requirements as to the tuberculin test and shall be held in quarantine at destination and retested for tuberculosis by an accredited veterinarian at the expiration of 60 days following the date of their arrival at destination, the tuberculin test to be made at the expense of the owner.

Health certificates issued to cover shipments of breeding and/or dairy cattle into Indiana must be executed in a legible manner. Cattle covered by a certificate not so executed will be held in quarantine until satisfactory certificates have been issued or approved by officials of the State of origin, and no cattle intended to be used for breeding and/or dairy purposes shall be shipped into Indiana until health certificates have been approved by the State or Federal veterinarian at point of origin and forwarded to the office of the State veterinarian of Indiana.

All cattle over 5 months of age, brought into the State of Indiana for breeding and/or dairy purposes,

shall be accompanied by certificates issued by an accredited veterinarian, showing the cattle to have passed a negative agglutination test for Bang disease, or bovine infectious abortion, within a period of 30 days immediately prior to the date upon which the cattle enter the State: *Provided, however,* That such cattle may be brought into the State of Indiana on permit issued by the State veterinarian, the permit to be issued only upon written agreement by the owner that said cattle shall remain in his possession and be kept separate and apart from all other cattle and subject to State quarantine until tested for Bang disease or bovine infectious abortion.

All reactors revealed by the test shall be marked for identification by having affixed in the left ear a special react tag furnished by the State veterinarian, the tag to be affixed by the veterinarian applying the test.

All bulls entering the State from public stockyards, unless intended for immediate slaughter, shall, prior to such movement, be subjected to a tuberculin test, such test to be applied by a qualified veterinarian and a record thereof shall be submitted to the office of the State veterinarian: *Provided,* That bulls not over 6 months of age intended to be castrated on arrival at destination may be admitted on the owner's affidavit, or that of his agent, submitted to the representative of the United States Bureau of Animal Industry at public stockyards, setting out that such castration will actually be accomplished.

Female and steer cattle of beef breeds may enter the State for feeding and grazing purposes subject to quarantine and Indiana regulations on arrival at destination: *Provided, however,* That the necessary forms covering such shipment have been executed by the consignee or his duly authorized agent and submitted to a representative of United States Bureau of Animal Industry at public yards for approval.

Such consignments of feeding cattle originating outside of public stockyards where Federal inspection is maintained must be covered by special permit from the State veterinarian.

All cattle intended for exhibit at the Indiana State Fair shall first be subjected to a tuberculin test, the same to be applied by a qualified veterinarian, and the owner or owners of such animal or animals shall be required, prior to the admittance of the cattle to such State fair, to present to the person or persons in

charge of the exhibit a certificate of health showing the animal or animals to have passed such a test within 90 days immediately preceding date of exhibit, except cattle from an accredited herd or from a herd having passed a negative test within the six months immediately preceding date of exhibit.

Sheep.—Health certificate showing that they have been dipped, if passing through public stockyards: *Provided*, That in the winter and such times as the dipping of sheep would be hazardous to their health, the sheep may be withdrawn on permit from the State veterinarian, which permit shall be issued on the written agreement of the owner that the sheep will remain in his possession, such sheep to be dipped at the direction and at such time as the State veterinarian may direct and at the expense of the owner.

Sheep originating outside of public stockyards where Federal inspection is maintained must be accompanied by qualified and approved veterinarian's health certificate or certificate signed by a veterinarian regularly employed by the Bureau of Animal Industry, United States Department of Agriculture, stating that the sheep are free from scabies and all communicable or infectious diseases, copy of such certificate to be mailed to the State veterinarian. If health certificate can not be obtained the consignments of sheep must be so routed as to be dipped in transit under Federal supervision.

Swine.—For breeding or exhibition purposes must be accompanied by a health certificate issued by a graduate licensed veterinarian, showing them to have been immunized by either the serum-alone or the serum-simultaneous method. The original of such certificate shall be attached to the waybill covering the shipment, and a duplicate thereof shall be forwarded to the office of the State veterinarian.

If the serum-alone method is used the certificate must show such treatment to have been administered within the 10 days immediately preceding date of shipment, or that the serum-simultaneous treatment shall have been administered at least 30 days prior to date of shipment.

All hogs must be shown to be free from contagious and infectious diseases and must not have been exposed thereto, and all crates in which shipments are made must have been thoroughly cleaned and disinfected.

Hogs intended for feeding may be admitted on permit obtained from the office of the State veterinarian,

subjecting them to immunization and quarantine for 30 days on the premises of the owner.

Permits will be issued for the removal of healthy swine from public stockyards when the swine have been immunized and dipped under the supervision of a veterinary inspector of the United States Bureau of Animal Industry or of an authorized deputy State or county veterinarian before movement from such yards, and all quarantine regulations are complied with: *Provided*, That no permits will be issued to any person to administer serum or virus for treatment of such swine unless such serum and virus are made in compliance with the Indiana law and the person administering them is a licensed veterinarian.

Who may inspect.—Veterinary inspectors of the United States Bureau of Animal Industry, or authorized State or deputy State veterinarians.

Official.—State veterinarian, 151 Statehouse, Indianapolis.

IOWA

Horses, mules, and asses.—All horses, mules, and asses imported into the State must be accompanied by a certificate of health, showing a record of mallein test and certifying that the animals described on the certificate have been inspected and found free from all other contagious or infectious diseases. Such inspection shall not have been made more than 30 days prior to the date of importation.

Cattle.—All dairy or breeding cattle with the exception of cattle from "Bang abortion-free accredited herds" must pass an agglutination blood test approved by the State livestock sanitary board of State of origin within 30 days prior to date of importation. Tests will not be accepted if made within 15 days after cattle have calved. Date of test and results must be shown on the health certificate.

Dairy and breeding cattle will be admitted only subject to the following conditions:

(1) That such cattle come from a herd which has been officially accredited as a tuberculosis-free accredited herd by the State from which such cattle come or by the Department of Agriculture of the United States; or

(2) That such cattle come from an area officially declared as a modified accredited area by such State or the Department of Agriculture of the United States, and the herd from which they originate, if previously

infected, has passed two tests free from tuberculosis; or

(3) That such cattle brought into the State of Iowa from other than a tuberculosis-free accredited herd or a modified accredited area shall be accompanied by a health certificate including tuberculin-test chart and be placed under quarantine to be tuberculin tested and fully examined in not less than 60 days nor more than 90 days, such test to be applied by a veterinarian accredited by the Department of Agriculture of the State of Iowa and at the expense of the owner or owners. Cattle brought in under quarantine shall be accompanied by an official certificate issued by a veterinarian accredited by the State from which the cattle come or by the Department of Agriculture of the United States showing them to be free from tuberculosis. The quarantine thus provided for shall be established by the department of agriculture of the State and shall not be released until the examination has been made and the cattle found to be free from tuberculosis.

All Federal regulations must be observed.

The tuberculin tests accepted are the subcutaneous, intradermic, and ophthalmic.

The intradermic tuberculin test will be accepted provided it has been applied by a regularly employed State or Federal veterinarian, an accredited veterinarian, or by an approved veterinarian when indorsed by the authorities of the State of origin, provided the observations be made at the seventy-second hour.

The ophthalmic test will not be accepted as an official test except when applied in combination with either the subcutaneous or the intradermic test.

All tuberculin tests must be made within 30 days of date of shipment except for cattle from tuberculosis-free accredited herds and from modified accredited areas.

All certificates of health must show the number of cattle included in the test, the name of the owner, and the post-office address.

All cattle not identified by registration name and number shall be identified by a proper metal tag bearing a serial number attached to the right ear.

No cattle shall be brought in or allowed to enter a modified accredited area or a county operating under the county area plan for the eradication of tuberculosis except in accordance with the requirements herein.

All herds of breeding cattle in counties that are under State and Federal supervision for the eradication of tuberculosis in which reactors have been found may be held in quarantine until they have passed a negative tuberculin test.

All untested steer cattle in counties that are operating under the county-area plan for the eradication of tuberculosis shall be handled and maintained as a separate unit from the breeding cattle (which means they shall be quarantined, watered, and fed apart from breeding cattle).

In counties engaged in the area plan of tuberculosis eradication, female cattle, the products of which are intended for family use, may be tuberculin tested without being denied the use of the same pastures and the same watering troughs as steers in feeding. This does not apply to female cattle, the products of which are handled commercially; neither does it apply where the feeding cattle are other than steers. Cows kept under such conditions can not be sold for any purpose other than slaughter without being subjected to an additional tuberculin test.

Certificates and test charts must be made to conform with United States Bureau of Animal Industry regulations governing the interstate movement of cattle; the original must be attached to the waybill, and a copy forwarded to the chief of division of animal industry, Iowa Department of Agriculture, Des Moines.

All female cattle and bulls for feeding and grazing purposes shipped into the State of Iowa, when untested and not from a State and Federal accredited tuberculosis-free herd or an area officially declared by the chief of the United States Bureau of Animal Industry as modified accredited areas, may be brought into the State provided they are marked for identification by being branded skin deep with the letter "F" not less than 2 nor more than 3 inches high on the right jaw.

Each shipment shall be accompanied by an agreement, on the part of the owner, that the animals will be handled and maintained as a separate unit from breeding cattle (which means they shall be quarantined, watered, and fed apart from breeding cattle), and that they will not again be sold or moved without the permission of the department unless and until they shall have received a tuberculin and an agglutination test administered by a qualified veterinarian,

and a record of such tests shall have been filed in the office of the Iowa Department of Agriculture, Des Moines.

Agreements required for the purpose shall be obtained from the Iowa Department of Agriculture.

The chief of the division of animal industry (of the State) is authorized to reject any test chart or certificate and require a retest.

Cattle for immediate slaughter can be shipped, transported, or otherwise moved into the State to a place where bureau or State meat-inspection service is maintained or to a place designated by the State department of agriculture, division of animal industry.

Reactors brought in for immediate slaughter must be consigned to a slaughtering establishment having Federal inspection and must be transported thereto in accordance with the regulations of the United States Bureau of Animal Industry.

Cattle sold out of the State under sale contract to pass a 60 or 90 day tuberculin test and failing to pass the same, before being returned to the original owner it is necessary for the party wishing to return the animal or animals to furnish a tuberculin-test chart showing the reaction, giving the date of reaction, and proving to the satisfaction of the chief of the division of animal industry (of the State) that the animals are reactors.

All cattle presented for exhibition or other purposes at the Iowa State Fair or any fair or exhibition held within the State shall be either from a tuberculosis-free accredited herd or from a herd that has passed one clean test, within one year, under the cooperative plan or the county area plan for the accrediting of herds. Cattle other than those specified above shall have passed a satisfactory tuberculin test and found to be free from tuberculosis not more than 90 days prior to the opening date of the exhibition at such fairs.

Swine.—All swine imported into the State except for immediate slaughter must be accompanied by a certificate of health, certifying that they have been immunized with a protective dose of anti-hog-cholera serum not more than 15 days prior to date of importation when the serum alone is used and not less than 30 days prior to date of importation when the simultaneous method is used.

In lieu of a veterinarian's certificate, hogs shipped in crates for breeding purposes will be accepted on the

owner's affidavit, made in triplicate, that hogs have been immunized as required above. One copy of said affidavit is to be attached to the waybill for the shipment, one copy to be sent to the chief of the division of animal industry, Des Moines, and a copy to the livestock sanitary office of the State from which the shipment originates.

Stock hogs from central markets or livestock exchange may be shipped into the State in compliance with the regulations of the United States Bureau of Animal Industry. Shipments handled under this rule must be held intact and under quarantine on consignee's premises for a period of not less than 21 days from date of immunization.

All swine exhibited at State, county, or other fairs or exhibitions in the State must be accompanied by a certificate that they have been immunized with anti-hog-cholera serum and hog-cholera virus not less than 30 days, or when serum alone is used not more than 15 days, prior to the date of such fair or exhibition.

Sheep.—Breeding sheep imported into the State, except for immediate slaughter, must be accompanied by a certificate that they have been inspected or dipped under Federal regulations not more than 15 days prior to date of importation and found free from all contagious, infectious, or transmissible diseases.

Feeding sheep may be brought into the State without dipping under special permit issued by the chief of the division of animal industry, Iowa Department of Agriculture, provided that they do not come from an area, public stockyard, or a feeding station that is under State or Federal quarantine on account of scabies or any other communicable disease. Shipments of this kind are to be accompanied with a health certificate issued by an inspector of the United States Bureau of Animal Industry or by an accredited veterinarian showing them to be healthy. A copy of health certificate is to accompany the shipment, a copy to be forwarded to the Iowa Department of Agriculture, division of animal industry. It is further provided that they will be handled and maintained as a separate unit from breeding sheep and that they will not again be sold or moved, unless permission is granted by the department, without being dipped in a lime-sulphur dip made in the proportions of 8 pounds of unslaked lime (or 11 pounds of commercial hydrate lime, not air-slacked lime) and 24 pounds of flowers of

sulphur to 100 gallons of water, or a nicotine dip containing not less than five one-hundredths of 1 per cent of nicotine, under the supervision of a qualified veterinarian.

A record of such dip shall have been filed in the office of the Iowa Department of Agriculture, Des Moines, or if at the end of 30 days the sheep have not been dipped and are in a healthy condition and so certified to the department by a qualified veterinarian they may be released from quarantine.

Exceptions.—The shipment into the State of horses, cattle, sheep, or swine from districts under State or Federal quarantine on account of mange or scabies is strictly prohibited.

These requirements do not apply to livestock destined to a public market or livestock exchange in Iowa.

Nothing in these rules shall apply to livestock destined to public markets, livestock exchanges, or to a place designated by the Iowa Department of Agriculture, division of animal industry, within the State of Iowa, where the United States Bureau of Animal Industry or State department of agriculture, division of animal industry inspection service, is maintained, but all sections of these rules shall apply to movement of livestock from public markets or livestock exchanges within the State of Iowa destined to other points within the State.

All stock cars used for hauling livestock (cattle, horses, sheep, and swine) for feeding, breeding, or stock purposes into the State of Iowa must be cleaned and disinfected before such shipments of livestock are loaded.

Railroad and transportation companies are forbidden to move any livestock into or within the State or through the State except in compliance with the provisions set forth in any of these regulations, or on a special permit from the chief of the division of animal industry, Des Moines.

Who may inspect.—Certificates and test charts must be issued by a Federal, State, or assistant State veterinarian duly recognized by the United States Bureau of Animal Industry, or by an accredited State veterinarian or other authority having charge of diseases of domestic animals in States of origin. Certificates must be made in quadruplicate, the original to be attached to the waybill and the three copies to be for-

warded by the veterinarian issuing them to the proper sanitary authorities, as indicated on margin of the copies of health certificates.

Official.—Chief of the division of animal industry, department of agriculture, Des Moines.

KANSAS

Livestock originating in any territory within the jurisdiction of the United States will be admitted into and permitted to pass through Kansas by complying with the rules and regulations of the United States Bureau of Animal Industry, and with the rules and regulations of the State livestock sanitary commissioner.

Horses, mules, and asses.—Certificate of soundness must accompany stallions and jacks, together with affidavit of owners that the animals are free from all contagious, infectious, or communicable diseases. Other horses, mules, and asses admitted without inspection.

Cattle.—Cattle to be used for dairy or breeding purposes will be admitted into Kansas on a tuberculin-test certificate issued by an inspector of the United States Bureau of Animal Industry, or a State and federally accredited veterinarian of the State in which the cattle originate. The tuberculin-test certificate must show that the cattle have been tested within six months previous to the date of shipment. One copy of said certificate must be sent to the State livestock sanitary commissioner, Topeka, and one copy attached to the shipping bill.

All cattle originating in modified-accredited-area counties or from Federal-State accredited herds will be admitted into Kansas upon presentation of certified statement to that effect made by a representative of the United States Bureau of Animal Industry, or representative of the livestock sanitary department in the State of origin.

Cattle from public stockyards will be admitted into Kansas on certificates issued by an inspector of the United States Bureau of Animal Industry, or State and federally accredited inspectors stationed at the yards for the purpose by the State sanitary authorities of the State in which the yards are located. One copy of the tuberculin-test chart must be sent to the State livestock sanitary commissioner, Topeka.

Cattle shipped into Kansas to be used for dairy purposes by a nonresident owner must be held for a period of 60 days from date of shipment and then tested for tuberculosis by an accredited veterinarian under the direction of the livestock sanitary commissioner, at the owner's expense, before disposing of them at either private or public sale and then sold under a 90-day retest guarantee.

Purebred registered cattle to be used for dairy or breeding purposes, originating in herds where tuberculosis has been found under the test, will not be admitted into Kansas until said herds have undergone two clean tests within six months prior to shipment.

All cattle to be used for dairy or breeding purposes must be tested for tuberculosis by a veterinary inspector of the United States Bureau of Animal Industry, or a State accredited veterinarian, not less than six months before shipment into a modified accredited county. Female cattle can be shipped into such counties for grazing or feeding purposes without the tuberculin test on a permit issued by the livestock sanitary commissioner or his agent.

Swine.—Stock hogs will be admitted into Kansas for feeding purposes on a permit for that purpose issued by the State livestock sanitary commissioner.

Breeding hogs will be admitted into Kansas on an affidavit of the owner to the effect that said hogs are healthy and originated on noninfected premises. The original affidavit must be attached to shipping bill and a duplicate forwarded to the State livestock sanitary commissioner, Topeka.

Sheep.—No restrictions.

Who may inspect.—Inspectors of the United States Bureau of Animal Industry; veterinarians and inspectors having a commission from the State livestock sanitary commissioner.

Official.—State livestock sanitary commissioner, Topeka.

KENTUCKY

Horses, mules, and asses.—Official health certificate.

Cattle.—All dairy and breeding cattle, including calves, coming into the State must be accompanied by an official health certificate, including record of tuberculin test showing them to be free from tuberculosis or other contagious, infectious, or communicable disease, the test being applied within 60 days prior to

shipment. Subcutaneous tuberculin test will be accepted when applied by veterinarians recommended by the State and approved by Federal officials. Intradermic tuberculin test will be accepted when applied by a regularly employed State or Federal veterinarian or veterinarians accredited by State and Federal officials, provided the date of injection and hour of observation (seventy-second hour) are recorded.

All cattle coming into Kentucky are subjected to a tuberculin test at the discretion of the State veterinarian.

Range female cattle of the beef breeds for feeding or grazing purposes are admitted, except into accredited counties, when accompanied by an official health certificate issued by a State, Federal, or approved veterinarian of the State of origin, who shall certify that he has inspected the cattle and that they are of the range type and free from symptoms of disease, and an affidavit of the owner or his authorized agent stating that the animals will be used for feeding or grazing purposes only, and that they will be segregated from dairy and breeding cattle during the feeding or grazing period, and will not be removed from premises except by special permit from the State veterinarian, said cattle being under quarantine until permit is issued for their removal; said affidavit shall give the exact number and kind of cattle, the name of the person from whom purchased, the name and post-office address of the person to whom consigned, and destination of shipment. Affidavit and copy of health certificate must be sent to the State veterinarian.

Cattle for exhibition purposes are admitted when accompanied by official health certificate, including record of tuberculin test showing the cattle to be free from tuberculosis, issued by a veterinarian as designated in first paragraph, not to exceed 60 days prior to entering the State.

Cattle are admitted from officially accredited tuberculosis-free herds as long as accredited certificate is in force, from modified accredited areas as long as such area is so declared, from herds under supervision on a tuberculin test conducted not longer than six months before shipment, official health certificate and record of tuberculin test as required in first paragraph.

Cattle are admitted for immediate slaughter without inspection when consigned to a designated slaughtering place.

Swine.—For stocking, feeding, or breeding purposes official health certificate by qualified veterinarian, showing immunization with serum alone not more than five days before date of importation or with serum and virus before importation, and that they are free from all communicable swine diseases or exposure thereto during preceding 60 days, and have been dipped or sprayed in a 2 per cent solution of cresol compound, or its equivalent, and loaded in clean and disinfected car or crate. Date and method of immunization must be shown on the certificate. Hogs from public stockyards must be simultaneously treated according to Federal regulations.

Sheep.—Sheep intended for purposes other than immediate slaughter must be accompanied by a certificate of health indicating that they are free from disease and have been subjected to an official dipping for scabies in a solution approved by the United States Bureau of Animal Industry within 10 days immediately preceding date of shipment, and must be loaded in clean and disinfected cars. Supervising inspector shall furnish dipping certificate, giving name and strength of dip. Sheep from areas quarantined on account of scabies shall receive two dippings not less than 10 days nor more than 15 days apart and loaded in clean and disinfected cars. No sheep showing symptoms of necrobacillosis in any of its forms shall be allowed movement into the State.

Who may inspect.—State or Federal inspectors and veterinarians whose certificates are approved by the livestock sanitary officials of the State in which shipment originates.

A copy of all official health certificates, records of tuberculin tests, certificates of dipping, and certificates of immunization must be forwarded to the State veterinarian.

Official.—State veterinarian, Frankfort.

LOUISIANA

Horses, mules, and asses.—Health certificate showing freedom from contagious and infectious diseases. Horses, mules, and asses originating in areas quarantined on account of southern, splenic, or tick fever outside of Louisiana, shall not be transported, driven, or allowed to drift therefrom into the State of Louisiana unless dipped under official State or Federal supervision in a standard arsenical solution either at point of origin or in transit.

Cattle.—Dairy and breeding cattle shall be free from tuberculosis and must be tested before entering the State. Test must comply with requirements of the United States Bureau of Animal Industry, the tuberculin-test charts to be issued by qualified graduate veterinarians. The tuberculin-test chart shall include the reading and record of at least three pre-temperatures at intervals of not less than 2 hours and six post-temperatures beginning 8 hours after injection of the tuberculin and continued at intervals of 2 hours. The intradermic test is acceptable when made by bureau, State, or accredited veterinarian. The ophthalmic test alone is not acceptable.

Cattle from tuberculosis-free accredited herds or from herds under State and Federal supervision will be admitted when accompanied by certificate issued by livestock sanitary officials of the State of origin or by representatives of the United States Bureau of Animal Industry certifying that the cattle are from such herds and have been tested within 12 months prior to shipment.

All dairy or breeding cattle, 6 months of age or over, brought into the State, except cattle from Bang abortion-free accredited herds, must pass an agglutination tube test, such test to have been conducted within 30 days before date of movement. Test will not be accepted if made in less than 15 days after the animals have calved. All tests for infectious abortion on cattle moved into the State shall be made by State or commercial laboratories approved by the State of origin.

Original or telegraph report from the testing laboratory must be attached to the copy of official health certificate sent to the State livestock sanitary board or its executive officer, Baton Rouge. All cattle shall be ear-tagged or tattooed and shall be listed on health certificate according to such numbers. The same tag or tattoo used in tuberculin testing for interstate shipment may be utilized as a method of identification.

Range cattle, not including bulls, heifers, and milk cows, may be admitted into the State on clinical health certificate issued by a State, approved, or Federal veterinarian.

(NOTE.—All cattle for breeding and dairy purposes shipped into this State must be moved in compliance with Federal regulation No. 7, respecting tuberculin test by Federal and State approved veterinarian, such

certificates executed in detail in conformity with requirements of said Federal regulation.)

Swine.—Importation of purebred swine by express, in crates, is permitted when accompanied by affidavit of owner, countersigned by State sanitary official in State of origin, to the effect that the swine, to the best of his knowledge and belief, are not affected with hog cholera or other contagious swine disease, and that cholera has not existed on the premises from which such swine are being removed for a period of not less than three months.

Shipment of swine for feeding, exhibition purposes, or otherwise, to this State, except for immediate slaughter when consigned to a recognized slaughter center, must be accompanied by a certificate from a qualified veterinarian, showing that the swine have been immunized with serum-virus treatment not less than 30 days immediately prior to date of shipment or that they have been treated with serum alone not more than 15 days prior to shipment.

Railroad stockyards are considered to be infectious, and no hogs yarded in or loaded through them will be accepted in the State of Louisiana for any purpose other than immediate slaughter and consigned to a recognized slaughter establishment.

Hog-cholera virus or virulent blood shall not be shipped by serum manufacturers into the State except by written permission from the secretary and executive officers of the State livestock sanitary board.

Sheep.—Health certificate from qualified graduate veterinarian prior to shipment showing freedom from infectious, contagious, and communicable diseases.

Who may inspect.—Federal veterinarians, State veterinarians, deputy or assistant State veterinarians, and other veterinarians, provided they are graduates of veterinary colleges recognized by the United States Department of Agriculture and their competency and reliability are certified to by authorities in charge of livestock sanitary control work in the State where shipment originates.

Duplicates of all health certificates must be sent to secretary and executive officer in ample time to reach him before arrival of stock so represented in inspection certificates.

Official.—Secretary and executive officer, State livestock sanitary board, Baton Rouge.

MAINE

Horses, mules, and asses.—Any person or persons bringing horses into the State must have a permit and shall notify the chief of the division of animal industry within 48 hours of their arrival; the chief of the division of animal industry shall at once cause the animals to be examined by a physical examination, or to be tested with mallein, or cause the blood test to be used at the expense of the owner; or the chief of the division of animal industry may accept a certificate of health showing satisfactory mallein test or physical examination made by an inspector of the United States Bureau of Animal Industry, or by a veterinarian whose certificate is approved by the State official having authority to approve it under the laws of the State from which the animal was shipped. If an animal is found to be glandered, no compensation shall be allowed.

No permit or examination will be required for horses used in circuses or to perform on the stage.

Cattle.—No neat stock (calves, cows, steers, oxen, or bulls) or stags of any age shall be allowed to enter this State from any other State or country, for either dairy purposes, breeding purposes, or for slaughter, except cattle in transit under the control of the Federal Government, without a permit duly authorized by the chief of the division of animal industry, which permit shall accompany the shipment.

All persons bringing animals into the State must conform to the regulations of the United States Department of Agriculture requiring that such animals be tuberculin tested within a reasonable time prior to shipment, such test being administered by an inspector of the United States Department of Agriculture or by a veterinarian authorized by said United States Department of Agriculture to test for interstate shipment, and a copy of the tuberculin-test chart of such test must also accompany the animal or animals so tested whether brought into the State by steamship, railroad, truck, or any other conveyance, or driven on foot.

All cattle brought into the State, except cattle coming from fully accredited herds or herds under State and Federal supervision in which no reactors were found on last test, shall be held in quarantine and be subjected to a 60-day retest at the expense of the

owner. This shall not apply to cattle brought into the State on test by an approved veterinarian that are intended for reshipment out of the State, but the State will not pay indemnity on such cattle provided they react while in the State, and all cattle in such consignments must be accounted for to the chief of the division of animal industry, and if any are sold to remain in the State they shall be retested at the expense of the owner. This ruling shall not, however, apply to calves under 1 year of age from a fully accredited herd, or to cattle designed for immediate slaughter, but the latter must be slaughtered within 10 days after being brought into the State under inspection that shall be acceptable to the commissioner of agriculture or his duly authorized agent in charge of the livestock sanitary work.

Swine.—Consignments of swine brought into Maine from other States shall be accompanied by a permit together with certificate from a veterinarian who is approved for interstate work showing that the hogs are from a herd where no hog cholera has existed or one that has been immunized by the serum and virus treatment, such treatment to have been administered at least 25 days prior to shipment. This rule does not apply to hogs for immediate slaughter consigned to an abattoir where proper meat inspection is maintained.

Railroad shipping pens and public stockyards, including yards used for holding stock at slaughterhouses, are considered infected and hereby quarantined, and no hogs shall be shipped or moved from such places for feeding or breeding purposes.

Reshipment of hogs from such quarantine places for slaughter shall be accompanied by a permit from the chief of the division of animal industry, State department of agriculture, and transportation companies shall receive hogs for shipment only in compliance with this ruling.

Sheep.—No restrictions.

Transportation companies (express, railroad, or steamship) shall notify the chief of the division of animal industry of the arrival of livestock at their destination.

Who may inspect.—Qualified veterinarians authorized by the chief of the division of animal industry.

Official.—Chief, division of animal industry, department of agriculture, Augusta.

MARYLAND

Horses, mules, and asses.—Health certificate.

Cattle.—Cattle for dairy, breeding, or pasturing purposes may be brought into the State of Maryland when moved directly from herds under Federal and State supervision in the State from which the shipment originated, or have been assembled for a tuberculin test immediately prior to shipment from herds in the above status, provided the following regulations are complied with:

(a) If from accredited herds a tuberculin test must have been applied within the 12 months previous to shipment.

(b) If from modified accredited areas when from herds in which all the animals have passed a clean tuberculin test applied within the six months previous to shipment.

(c) If from herds under Federal and State supervision, a tuberculin test must have been applied within three months previous to shipment, and cattle must have originated in herds in which no reactors were found on the last test.

(d) Cattle in any of the above-mentioned classifications that have not been tested within the time limits set forth in paragraphs *a*, *b*, and *c* must be retested prior to shipment into Maryland.

(e) No cattle that have passed through a public stockyard or sale stable not properly equipped with thoroughly disinfected quarters maintained for the purpose of segregating at all times the tuberculin-tested from the untested animals, shall be admitted without being quarantined from 60 to 90 days at destination and subjected to a retest at owner's expense.

(f) Cattle eligible for importation into Maryland under this regulation must comply with the regulations governing the interstate movement of cattle in relation to Bang's disease and other diseases or other requirements that may now or later be in force and effect.

Consignments of cattle must be accompanied by a health certificate and tuberculin-test chart showing by the records of the livestock sanitary official of the State of origin, the status of each animal to be shipped, whether from an accredited herd, from a modified accredited area, or from a herd under Federal and State supervision [see paragraphs (a), (b), (c), (d), and (e)], approved by the proper livestock sani-

tary official of the State from which the cattle are brought, and a copy must be forwarded to the livestock sanitary service of the Maryland State Board of Agriculture, Baltimore, Md., so as to reach that department before the arrival of the cattle at destination.

All cattle shall be subject to a retest from 60 to 90 days after their arrival should there exist in the opinion of the officials in charge of the control of animal diseases in the State of Maryland a reasonable doubt as to the health of any of the animals. Pending a retest, such cattle shall be in strict quarantine at the expense of the owner. Cattle for exhibition at any fair or show held within the State of Maryland, whether consigned from within the State or from any other State or Territory, must be from herds under Federal and State supervision, and a satisfactory health certificate and tuberculin-test chart placed on file with the secretary of the association under whose auspices such fair or show is held, and a copy of this certificate must be mailed to the livestock sanitary service of the Maryland State Board of Agriculture so as to reach that department before the arrival of the cattle at destination.

Cattle for any reason entering the State of Maryland unaccompanied by a satisfactory health certificate as required by this regulation must be held in quarantine at the owner's expense until tested or released by an inspector especially designated by a duly authorized representative of the livestock sanitary service of the Maryland State Board of Agriculture.

No cattle originating in any area under quarantine on account of southern or splenic fever shall be transported or driven into the State, and transportation companies are notified not to accept shipments of such cattle when consigned to any point in this State.

Apparently healthy cattle may be shipped to the Union Stockyards, Baltimore, where an inspection station has been established, without previous examination and test. All bulls, cows, and heifers will be examined and tuberculin tested at this point. No permits will be necessary for such shipments. No charge will be made for this test, but cattle will have to remain in the stockyards at the owner's risk and expense until the completion of the examination and test, and until released by the representative of the State board of agriculture in charge of this work. No release will be issued for reactors, which must be immediately slaughtered under Federal inspection. All

cattle shall also be subject to the interstate shipment regulations pertaining to Bang's disease (infectious abortion).

Steers for feeding and grazing purposes.—Steers when accompanied by a tuberculin-test chart showing the animals have passed a clean test immediately prior to shipment, or steers may be shipped or transported into Maryland without previous tuberculin test provided a permit has been obtained from the livestock sanitary service of the Maryland State Board of Agriculture before shipment is made.

Cattle for immediate slaughter.—Cattle for the purpose of immediate slaughter may be shipped into Maryland without permit when consigned to recognized slaughter centers only. When such animals are shipped to points other than recognized slaughter centers permits must be secured prior to shipment. Cattle consigned and delivered to an abattoir or slaughterhouse can not be removed without a permit from the livestock sanitary service of the Maryland State Board of Agriculture.

A tuberculin-test chart to be satisfactory to the board of agriculture must show the following:

(a) That the tuberculin test has been made by the subcutaneous or the intradermic method in conformity with the requirements of the United States Bureau of Animal Industry for making such tests, and

(b) That each grade animal is identified by a securely attached official ear tag of the State of origin and by a description shown on the chart. (Tags will not be required for purebred animals, but registration numbers and descriptions must be given.)

Swine.—All swine brought into the State for feeding, breeding, or show purposes must be accompanied by a certificate of health issued by a veterinarian whose competency and reliability are attested by the authorities charged with the control of the diseases of domestic animals in the State of export, stating that they are free from any infectious or communicable disease and that each animal has been treated with a proper dose of anti-hog-cholera serum from a United States approved laboratory, within 30 days of the date of entry into the State.

Hogs that have received the serum-virus treatment must not be brought into the State for purposes other than immediate slaughter until a period of at least 30 days has elapsed since date of treatment. The

animals must be given an antiseptic bath and not again exposed to infection before being shipped.

Sheep.—No restrictions.

Who may inspect.—Officially certified inspectors in the State from which animals originate, agents of the livestock sanitary service of the Maryland State Board of Agriculture, and inspectors of the United States Bureau of Animal Industry.

Officials.—Livestock sanitary service of the State board of agriculture, 815 Fidelity Building, Baltimore.

MASSACHUSETTS

Horses, mules, and asses.—No restrictions.

Cattle.—All cattle brought into the Commonwealth, if intended for dairy or breeding purposes, must be accompanied by a certificate of tuberculin test indicating that they are from a herd of cattle maintained under State and Federal supervision for the eradication of tuberculosis, in which herd no reactors were found at time of last entire-herd test, and must be accompanied by a permit signed by the director of animal industry, unless consigned (a) to public stockyards or quarantine stations at Brighton or Somerville, or (b) for immediate slaughter at premises where Federal inspection is maintained. Slaughter cattle shipped to other points in the State must be accompanied by permit of the director. Special permit is required for cattle transported into Barnstable County.

Special permit is required for cattle which have recently aborted or which have given a positive or suspicious reaction to the agglutination or complement-fixation test. Said animals to be held in quarantine until released by order of the director.

Swine.—Health certificate indicating hog cholera not prevalent at premises from which shipment arises.

Sheep.—No restrictions.

Who may inspect.—Qualified veterinarians approved by State livestock officials.

Official.—Director of animal industry, 20 Somerset Street, Boston.

MICHIGAN

Horses, mules, and asses.—Health certificate, including negative mallein test, to accompany all shipments, and a duplicate copy to be filed immediately with.

State veterinarian. Subject to quarantine for not less than 10 days at destination.

Cattle.—Health certificate, including tuberculin test, is required for dairy and breeding cattle. Affidavit from owner or agent for all steers for feeding and grazing purposes and all cattle for immediate slaughter.

Imported dairy and breeding cattle not originating in herds demonstrated to be free from tuberculosis under Federal and State supervision will be held in quarantine at destination, subject to retest in 60 days at owner's expense.

All cattle, except those for immediate slaughter, consigned to the following counties must be properly tuberculin tested: Cass, Clinton, Eaton, Genesee, Gratiot, Hillsdale, Iron, Kalamazoo, Lapeer, Livingston, Macomb, Muskegon, Oakland, Ogemaw, St. Joseph, Sanilac, Shiawassee, Washtenaw, and Wayne.

Cattle for feeding or grazing purposes require health certificate approved by chief livestock sanitary official of State and point of origin properly identifying such cattle as having originated in herds in a modified accredited area.

Negative record of agglutination test for Bang's disease, approved by State veterinarian of State of origin, on all dairy and breeding cattle over six months of age.

Swine.—For immediate slaughter, affidavit from owner or agent. For feeding or breeding, health certificate by approved, graduate veterinarian to the effect that the hogs have been immunized 21 days prior to date of importation following the use of the simultaneous inoculation, or within a period of 30 days following the use of the serum-alone method. A duplicate copy of health certificate showing date of immunizing to be filed immediately with the bureau of animal industry at Lansing.

Provided: Swine may be shipped in compliance with United States B. A. I. Order No. 309, regulation 6. All imported swine subject to quarantine for three weeks at destination.

Sheep.—Dip required March 31 to October 1, under State or Government supervision, except when permission has been obtained from the commissioner of agriculture or State veterinarian. Dipping requirements shall not be construed to apply to sheep imported for feeding purposes between August 31 and May 1.

Who may inspect.—Veterinarians graduated from an accredited veterinary college and authorized by State and Federal officials.

Tuberculin tests of imported cattle must be conducted by accredited veterinarians.

Official.—State veterinarian, Lansing.

MINNESOTA

Horses, mules, and asses.—All horses, mules, and asses imported into Minnesota must be accompanied by a health certificate, including mallein test, certifying that animals have been examined and mallein tested within 30 days prior to date of shipment and found to be free from glanders and other dangerous transmissible diseases.

In lieu of such health certificate and mallein-test chart, a permit may be obtained from the office of the State livestock sanitary board to import any apparently healthy horses, mules, or asses in quarantine and to remain in quarantine at destination until the animals shall have been examined and tested at the owner's expense by an approved veterinarian and released from quarantine by notice from the board.

Cattle.—No cattle shall be imported or brought into the State of Minnesota except in accordance with the following rules and regulations:

Cattle for immediate slaughter.—Apparently healthy cattle of any class may be consigned without a health certificate and tuberculin test to the public stockyards at South St. Paul, and apparently healthy cattle to be used only for immediate slaughter may be consigned without a health certificate and tuberculin test to slaughter establishment approved by the Bureau of Animal Industry of the United States Department of Agriculture and where the Federal Government maintains inspection. Cattle officially condemned for tuberculosis may be consigned to these points in compliance with Federal regulations for movement of such cattle interstate.

Cattle from accredited herds and modified accredited areas.—Cattle identified as coming from Federal-State accredited herds and from areas designated as modified accredited areas may be imported or brought into Minnesota if the cattle are healthy and are accompanied by a health certificate and a tuberculin-test chart, issued by the proper livestock sanitary official of the State from which said cattle are brought,

showing the number and the date of the certificate of accreditation, or that they originate from such area, and certifying that the entire herd passed a negative official test.

Cattle from herds and areas in process of accreditation.—Cattle coming from herds in which all animals have passed a negative tuberculin test in the process of accreditation under the Federal-State accredited herd plan or the modified-area plan within six months of entry may be imported or brought into Minnesota if the cattle are apparently healthy and are accompanied by a health certificate, including record and date of the official tuberculin test, issued by the proper livestock sanitary officials of the State of origin, certifying that the entire herd passed a negative test within six months: *Provided, however,* That when all such cattle are consigned to points in the counties in Minnesota that are officially designated as modified accredited areas or counties that are in the process of accreditation the cattle shall be held in quarantine at their destination subject to retest at the owner's expense not earlier than 60 nor later than 120 days from the date of the tuberculin test by which such shipment was made: *Provided further, however,* That if 60 days or more have elapsed since the herds from which such cattle originate were officially tested, and such cattle are again tuberculin tested and all pass a negative test immediately prior to their shipment, they may be consigned to points in such counties in Minnesota without the requirements of quarantine and a retest at destination if they are apparently healthy and accompanied by a health certificate issued or approved by the proper livestock sanitary officials of the State of origin, showing that they originated from such herds, giving date of the official tuberculin test and including the record and date of the tuberculin test made immediately prior to shipment.

Steers for feeding and grazing purposes.—Steers accompanied by an official health certificate showing them to be apparently free from any infectious, contagious, or communicable disease, may be brought into Minnesota, or may be shipped or transported from the public stockyards at South St. Paul to points in Minnesota for feeding and grazing purposes: *Provided, however,* That when such steers are consigned to counties that are officially designated as modified accredited areas, or are in the process of accreditation, then

a permit must be obtained from the secretary and executive officer of the State livestock sanitary board, permitting the shipment in quarantine at destination.

Bull calves for feeding and grazing purposes.—Bull calves of the beef breeds, under 6 months of age, accompanied by an official health certificate showing them to be apparently free from any infectious, contagious, or communicable disease may be brought into Minnesota or may be shipped or transported from the public stockyards at South St. Paul to points in Minnesota for feeding and grazing purposes, provided the owner makes a written declaration to the State livestock sanitary board that the animals will be castrated within 30 days after destination is reached, when a permit will be issued by the board for their shipment under special quarantine and confined separate from other cattle on the premises of the owner or such other premises designated in the order of the special quarantine, and the quarantine will be released by the board on receipt of notification by the owner that the animals have been castrated. When the animals are consigned to points in counties officially designated as modified tuberculosis-free areas or areas in the process of accreditation, the quarantine of such castrated animals will continue as provided by the preceding paragraph for importation of steers into such areas.

Cattle for immediate slaughter from public stockyards.—Cattle for the purpose of immediate slaughter may be transported or shipped from South St. Paul Union Stock Yards and from public stockyards in other States, to points in Minnesota, on receipt of a permit from the secretary and executive officer of the State livestock sanitary board for the shipment. Such cattle must be slaughtered within 10 days after arrival at destination, except when the 10-day period is extended by a special permit from an official or authorized agent of the Minnesota State Livestock Sanitary Board. During this interval they must be held separate and apart from any other cattle.

Purebred cattle.—Purebred cattle, unless from Federal-State accredited herds or herds in process of accreditation, accredited areas or areas in process of accreditation, and also with the exception of those shipped for slaughter or for feeding or grazing purposes as previously described, shall be accompanied by a health certificate, including a record of tuberculin test, showing the number of cattle included in the

test and the number of reactors disclosed, applied by an approved veterinarian, within 60 days of date of importation, and showing them to be free from tuberculosis and symptoms of any other contagious, infectious, or communicable disease. Such cattle will be quarantined at destination and subjected to a tuberculin retest at owner's expense, not earlier than 60 nor later than 90 days after date of importation.

All other classes of cattle.—All cattle brought into Minnesota which do not come within the foregoing provisions may be transported or brought into Minnesota if they are apparently healthy and are accompanied by a health certificate, including a record of tuberculin test, showing the number of cattle included in the test and the number of reactors disclosed, applied by an approved veterinarian within 60 days of date of importation and showing them to be free from tuberculosis and symptoms of any other contagious, infectious, or communicable disease: *Provided, however,* That if they are consigned to points in the counties of Minnesota officially designated as modified accredited areas or to counties that are in the process of accreditation they shall be quarantined at their destination and subjected to a tuberculin retest at the owner's expense, not earlier than 60 nor later than 120 days from the date of the tuberculin test by which such shipment was made.

Bang's abortion disease.—No cattle shall be brought into Minnesota for dairy or breeding purposes, except cattle consigned to the public stockyards at South St. Paul, unless they have passed a satisfactory, negative, agglutination, blood test for Bang's disease (infectious abortion) within 30 days prior to the date of importation, except cattle originating from herds officially designated and certified as free from this disease. The blood test must have been applied by veterinarians or laboratories approved by the sanitary authorities of the State of origin: *Provided, however,* That cattle which have given positive or suspicious reactions to the agglutination blood test for Bang's disease may be imported or brought into the State upon a special written permit issued by the secretary and executive officer of the State livestock sanitary board; such permit to be issued only upon receipt of a written agreement by the owner thereof that such cattle shall remain in his possession and be kept separate and apart from all cattle except those that have given positive reaction to the agglutination blood test.

Intradermic tuberculin test.—The intradermic tuberculin test will be accepted provided the test chart shows that observations are made at the seventy-second hour, and provided further that a second observation between the one hundred and twentieth and one hundred and fiftieth hours after injection shall be made in all lots or herds of cattle in which reactors were disclosed on the seventy-second-hour reading, and the second observation shall also be made on all lots or herds assembled for consignment into Minnesota.

Health certificates.—Health certificates shall accompany all cattle brought into Minnesota as required by these rules and regulations. Such certificates shall be approved by the proper livestock sanitary official of the State of origin and shall include the record and date of tuberculin test showing them to be apparently free from tuberculosis and shall also include a report and date of a satisfactory negative agglutination blood test for Bang's disease (infectious abortion). It shall also include a statement that the cattle are free from symptoms of any other contagious, infectious, or communicable disease, and a description of each animal included in the shipment and a record of the tests of such animals. Purebred cattle shall be described by name of breed, official registry number, name, sex, and age. Grade cattle shall be identified by color markings, sex, approximate age, and by proper official metal tag bearing a serial number, fastened securely in the right ear. All health certificates must be signed by a veterinarian approved by the United States Bureau of Animal Industry and the State of origin. If the agglutination blood test for Bang's disease is made by a veterinarian or by a laboratory, other than the approved veterinarian signing the certificate, the name of the laboratory or veterinarian making such test shall be stated on the health certificate.

Four copies of the health certificate shall be made, as required by the United States Bureau of Animal Industry. One copy shall be attached to the railroad shipping bill, or if the animals are imported by truck shall be carried by the driver of such vehicle. One copy approved by the sanitary authority of the State of origin, including date of his approval, shall be immediately forwarded so as to reach the office of the State livestock sanitary board, Old Capitol Building, St. Paul, before the arrival of the cattle at destination.

Swine for immediate slaughter.—All swine imported or brought into Minnesota for the purpose of immediate slaughter must be consigned to approved slaughterhouses where the Federal Government maintains inspection.

Purebred swine.—Purebred swine may be imported by express in crates when accompanied by affidavit of the owner, countersigned by the authorities of the State of origin, to the effect that said swine, to the best of his knowledge and belief, are not affected with hog cholera, necrobacillosis, or other contagious, infectious, or communicable swine disease, and that hog cholera has not existed on the premises from which said swine have been removed for a period of not less than 60 days immediately prior to date of shipment; also that the swine have been immunized with a protective dose of anti-hog-cholera serum not more than 15 days prior to date of importation when the serum alone is used, or with serum-and-virus treatment not less than 30 days prior to date of importation. Copy of said countersigned affidavit must be mailed to the Livestock Sanitary Board of Minnesota.

Swine from public stockyards.—Swine from public stockyards, for purposes other than immediate slaughter, may be imported or brought into the State only when shipped in compliance with the regulations of the United States Bureau of Animal Industry, and when shipments are made within 24 hours after immunization and dipping. Permits for such shipments must first be obtained by applying in writing to the executive officer of the State livestock sanitary board. The shipments must be held in quarantine at destination for at least 21 days and until the inclosures have been properly cleaned and disinfected. Cleaned and disinfected cars or other vehicles only shall be used for shipment.

All other classes of swine.—All other classes of swine, except those mentioned in the three preceding paragraphs, brought into Minnesota must be accompanied by a health certificate, issued by an approved veterinarian and indorsed by the sanitary authorities of the State of origin, showing them to be free from hog cholera or other contagious, infectious, or communicable disease and also that said swine have been immunized with a protective dose of anti-hog-cholera serum not more than 15 days prior to date of importation when the serum alone is used, or the serum-and-virus treatment not less than 30 days prior to date of

importation: *Provided, however,* That swine may be brought into the State for feeding purposes without having been immunized before shipment, if accompanied by the proper health certificate and on the receipt of a special permit from the executive officer of the State livestock sanitary board, in quarantine to be immunized by the serum-and-virus treatment at destination, at the expense of the owner. Such special permit with the health certificate shall be attached to the waybill, or if swine are transported by truck, it shall be in possession of the truck driver. The swine must be shipped in cleaned and disinfected cars or other means of conveyance and must not be unloaded in public stockyards or stock pens where trading in livestock is conducted.

Sheep.—All sheep shipped or brought into Minnesota for the purpose of immediate slaughter must be shipped or brought to slaughtering establishments and public stockyards in compliance with the regulations of the United States Bureau of Animal Industry.

All sheep shipped or brought from public stockyards to Minnesota and all sheep shipped or brought from public stockyards within the State, for purposes other than immediate slaughter, must be accompanied by a health certificate issued and signed by an inspector of the United States Bureau of Animal Industry certifying that they are free from scabies and symptoms of any other contagious, infectious, or communicable disease, and they must be shipped in cleaned and disinfected cars.

All sheep brought into Minnesota for purposes other than immediate slaughter must be accompanied by a health certificate, signed by an inspector of the United States Bureau of Animal Industry, or by an approved veterinarian when the health certificate shall be approved by the livestock sanitary authorities of the State in which the shipment originates, certifying that to the best knowledge, information, and belief of the veterinarian, the sheep therein described have not, within 30 days prior to date of such certificate, been exposed to the disease scabies, and that they are, at the date of making the certificate, free from all symptoms of scabies and any other contagious, infectious, or communicable disease. All such sheep shipped into the State must be shipped in cleaned and disinfected cars.

Certificates of health when made by an approved veterinarian must accompany the shipment of sheep

and a copy of the health certificate approved by the livestock sanitary authorities of the State of origin must be immediately mailed to the State livestock sanitary board, Old Capitol Building, St. Paul. When the inspection is made by an inspector of the United States Bureau of Animal Industry, a report of the inspection and shipment on Bureau of Animal Industry F. I. Form 24-B must be mailed to the State livestock sanitary board.

Dogs.—All dogs shipped, transported, or moved into Minnesota for any purpose, with the exception of performing dogs shipped for a limited period of time within the State, must be accompanied by a certificate of health issued by the State or Government veterinary officials, or by an approved veterinarian, and the certificate approved by the State or Government officials of the State of origin, stating that the animals have not been exposed to rabies and are free from symptoms of any communicable disease.

One copy of the health certificate must accompany the shipment and a copy be immediately forwarded to the State livestock sanitary board, Old Capitol Building, St. Paul.

Who may inspect.—Veterinary inspectors of the United States Bureau of Animal Industry, State and deputy State veterinarians, graduate veterinarians whose certificates of health and inspection are indorsed by officials in charge of livestock sanitary control work in the State from which the animals are shipped, and veterinarians authorized to issue health certificates by the chief of the Bureau of Animal Industry, United States Department of Agriculture.

Certificates of health must accompany the shipment of stock and indorsed copies must be immediately mailed to the State livestock sanitary board, Old Capitol Building, St. Paul.

All mallein tests must be made within 30 days of shipment.

Official.—Secretary and executive officer, State livestock sanitary board, Old Capitol Building, St. Paul.

MISSISSIPPI

Horses, mules, and asses.—No health certificate required. The mallein test may be required at owner's expense at point of destination at discretion of State veterinarian. Dipping and Federal certification from Louisiana and all territory quarantined for ticks.

Cattle.—All oxen, bulls, and female cattle brought into Mississippi shall be accompanied by a health certificate stating that the animals are free from any contagious or infectious disease, and to determine the absence of tuberculosis all such cattle shall be tested with tuberculin, and a negative reaction obtained, before entering the State, such test to be made and such certificate issued by a veterinarian authorized by the proper authority of the State in which the cattle originate and approved by the United States Bureau of Animal Industry.

Steers other than oxen may be brought into the State on affidavit of the owner that the steers are for feeding and grazing purposes and have not been used as oxen prior to shipment into Mississippi.

All cattle originating in any area quarantined on account of ticks (*Margaropus annulatus*) shall also have a Federal certificate indicating that such cattle are free of ticks and that movement is made in accordance with Federal regulations governing the interstate movement of livestock.

At the discretion of the State veterinarian all cattle brought into Mississippi in accordance with the first paragraph of this regulation may be retested at owner's expense, by a veterinarian approved by the State veterinarian.

Notice is given that no cattle for breeding or dairy purposes shall be brought into the State of Mississippi which have at any time given a positive or suspicious reaction to any officially recognized test for infectious abortion and all movements of such livestock shall be accompanied by a health certificate issued by an approved veterinarian of the State of origin indicating that the cattle covered by the health certificate have given a negative reaction to the agglutination test within 15 days prior to the date of shipment.

Swine.—Health certificate or affidavit of owner indicating freedom from any communicable disease or exposure to such diseases within a period of six months prior to shipment. One copy of certificate must be forwarded at time of shipment to the State veterinarian, Jackson.

Sheep.—All sheep shipped, driven, trailed, or otherwise brought into the State of Mississippi for purposes other than immediate slaughter must be accompanied by a certificate of health indicating that they are free from disease and have been subjected to an

official dipping for scabies in a solution approved by the United States Bureau of Animal Industry, within 10 days immediately preceding date of shipment, and must be loaded in clean and disinfected cars. Supervising inspectors shall furnish dipping certificates, giving name and strength of dip. Sheep from areas quarantined on account of scabies shall receive two dippings not less than 10 days, nor more than 15 days apart, and shall be loaded in clean and disinfected cars.

Who may inspect.—Approved veterinarians, veterinary inspector of the United States Bureau of Animal Industry.

Official.—State veterinarian, Jackson.

MISSOURI

Horses, mules, and asses.—No restrictions.

Cattle.—All breeding and dairy cattle shall enter the State in conformity with Federal regulations pertaining to tuberculin tests; the State law requires recognized negative test for Bang's disease, tests to be administered by a graduate veterinarian approved by the official of the State of origin and by the United States Bureau of Animal Industry, or by a veterinary inspector of that bureau. State veterinarian has authority to issue resident a special permit to import reactors to abortion test for breeding purposes, only when placed in strict quarantine.

Cattle for feeding or grazing purposes, of the beef breeds only, are admitted without the tuberculin and Bang test on special permit by application to the State veterinarian when accompanied by an affidavit that the cattle will be used for feeding or grazing purposes. All cattle for feeding or grazing purposes must be held in quarantine on the premises of the consignee until shipped to some public livestock market or until they pass satisfactory tests and are released by order of the State veterinarian.

Swine.—Federal regulations govern all hog shipments from public livestock markets or other points outside the State under Government supervision.

Hogs shipped by freight from points outside the State not under Federal supervision must be accompanied by a certificate of health, including immunization, issued by an authorized graduate veterinarian showing that the hogs have been immunized against hog cholera.

No inspection required for hogs shipped to public markets or for purebred hogs shipped in crates by express.

Sheep.—No restrictions.

Who may inspect.—Cattle: Federal veterinarian or veterinarian approved by the State and by the United States Bureau of Animal Industry.

Other inspections.—Official veterinarian, State or Federal, or graduate veterinarian, whose certificate shall be approved in writing by State veterinarian or like officer.

Official.—State veterinarian, Jefferson City.

MONTANA

Animals, including poultry affected with an infectious, contagious, or communicable disease, including animals and poultry which give, or are known to give, a positive reaction to a serologic or allergic test for Bang's disease (infectious abortion) or any infectious, contagious, or communicable disease shall not be shipped, trailed, driven, or transported in any way into the State of Montana except as hereinafter provided.

Horses, mules, and asses.—Health certificate, including mallein test. Horses, mules, and asses may be shipped in without inspection to quarantine yards at Miles City, Dillon, or Billings, provided the waybills bear the notation "Consigned to quarantine yards at _____, Montana." Animals so shipped will be inspected and tested at owner's expense by a representative of the Montana Livestock Sanitary Board before released from quarantine yards. Wild, unbroken, range horses, mules, or asses may be shipped into Montana on a clinical health certificate provided each individual animal is given a clinical chute inspection.

No certificate is necessary for horses shipped into Montana for temporary circus, racing, or speed purposes.

Stallions and jacks.—In addition to mallein test, a certificate of soundness, original of which must accompany shipment, a copy mailed to the stallion registration board at Bozeman, Mont., at least 10 days before the importation of stallion or jack into State. No stallion or jack which is neither purebred nor grade shall be imported into the State for breeding purposes. A "grade" is defined as an animal whose sire or dam, but not both, is a registered purebred animal.

Cattle.—All cattle (breeding cattle, spayed heifers, calves, and steers) brought into the State of Montana must be accompanied by a tuberculin-test chart issued by a veterinarian approved or accredited by the United States Bureau of Animal Industry, excepting that strictly range cattle shipped directly from the range sections of Arizona, California, Colorado, Idaho, New Mexico, Oklahoma, Nevada, Oregon, Utah, Washington, Texas, Wyoming, North Dakota, and South Dakota west of the Missouri River, Kansas, and Nebraska west of the one hundredth meridian, Alberta, Saskatchewan, and British Columbia need not be accompanied by a tuberculin-test chart but must be accompanied by a clinical health certificate issued by an approved or accredited veterinarian.

All bulls from any State or Territory, Canada, or Mexico, must be accompanied by an official tuberculin-test chart.

Cattle from a public-sale yard, with the exception of range cattle certified by the Federal inspector in charge as coming directly from the above-designated range sections, must be accompanied by a tuberculin-test chart approved by the Federal veterinary inspector in charge.

All purebred and dairy cattle from other than Federal-State accredited tuberculosis-free herds must be held in quarantine after arrival at destination, subject to a 60 to 90 day tuberculin retest. It shall be the duty of the owner or his agent to notify the State veterinary surgeon at Helena of the importation of any purebred or dairy cattle and such cattle must be held subject to the 60 to 90 day retest and not sold or distributed until they have passed a successful official retest.

Cattle other than dairy or purebred cattle may be held in quarantine subject to a 60 to 90 day retest and inspection when considered necessary or advisable by the State veterinary surgeon.

These tests will be made free of charge.

Cattle from Federal-State accredited tuberculosis-free herds may be shipped into Montana without tuberculin-test chart when accompanied by a statement from the livestock sanitary official of the State of origin or from the United States Bureau of Animal Industry inspector in charge and the owner of the cattle, or his agent, that the cattle are from a tuberculosis-free accredited herd and are free from any symptoms of an infectious or contagious disease and

such statement must give the tuberculosis-free accredited-herd certificate number and show that the cattle have been officially tuberculin tested not longer than 12 months previous to the date of shipment.

Cattle from an area officially tested by the sanitary officials of the State of origin and the United States Bureau of Animal Industry as a modified accredited area, may be transported or shipped into the State of Montana, provided they originate immediately at the time of shipment from a herd in such area in which no reactors were disclosed on the last official tuberculin test, if accompanied by a proper health certificate, showing such origin and indorsed or approved by the livestock sanitary official of the State of origin or the United States Bureau of Animal Industry inspector in charge.

Cattle from a modified tuberculosis-free area shall be subject to a 60 to 90 day tuberculin retest.

All dairy and purebred cattle imported or brought into the State of Montana, except cattle for immediate slaughter, must have passed a satisfactory, negative, agglutination, blood test for Bang's disease (infectious abortion) within 30 days prior to date of importation, except cattle originating from Bang-disease-free accredited herds. The blood test must have been applied by veterinarians or laboratories approved by the sanitary authorities of the State of origin. A report of the satisfactory negative blood test must accompany the shipment and a copy of such report must be mailed immediately to the livestock sanitary board at Helena. The report must contain a list of the individual cattle, together with a satisfactory report and description of the test. The report may be made on the tuberculin-test chart that accompanies the shipment.

Swine.—Swine for breeding or feeding purposes must be accompanied by a health certificate stating that the animals are free from any infectious or contagious disease and that they do not come from a public stockyard or a district in which hog cholera has existed during the past three months, and provided that the animals have not been subjected to the serum-and-virus treatment within 30 days immediately prior to date of shipment.

Swine may be shipped from a district where hog cholera has existed during the past three months: *Provided*, That they have been properly immunized by the use of anti-hog-cholera serum within 15 days

of shipment or have been subjected to the serum-and-virus treatment not less than 30 days previous to date of shipment: *And provided further*, That they have been kept on a premise or a farm on which hog cholera has not existed for the past three months: *And provided further*, That they have been properly dipped, just previous to shipment, in a solution recognized by the United States Bureau of Animal Industry.

Swine for slaughter.—Health certificate or statement by the shipper or owner that they will be shipped direct to an abattoir and slaughtered within seven days after their arrival at destination.

Purebred swine.—Purebred swine transported in crates by express will be admitted into the State of Montana when accompanied by an affidavit of the owner or his agent to the effect that said swine, to the best of his knowledge and belief, are not affected with hog cholera or any other communicable disease and that hog cholera has not existed on the premises from which said swine have been removed for a period of not less than three months immediately prior to date of shipment. Also that said swine have not been subjected to the serum-and-virus treatment within 30 days immediately prior to date of shipment.

Swine for exhibition.—All swine to be exhibited in Montana at State or county fairs must be accompanied by health certificate stating that they are free from any symptoms of an infectious or contagious disease and that they have been properly immunized with the use of anti-hog-cholera serum only, within 15 days of shipment, or that they were subjected to the serum-and-virus treatment not less than 30 days immediately prior to date of shipment.

Sheep.—All sheep shipped or trailed into the State must be accompanied by a health certificate issued by an approved graduate veterinarian certifying that the sheep are free from any symptoms of an infectious or contagious disease, and have not been exposed to scabies for a period of at least six months preceding date of inspection.

It being recognized by sanitary authorities that public stockyards should be construed as infected premises, and as railway loading yards and chutes may likewise be infected, and as sheep scabies may not become apparent or visible for 90 days or longer, it is hereby ordered that all sheep shipped or trailed into the State must be shipped in to quarantine, and quarantined for a period of not less than 90 days

and until inspected and released by a representative of the Montana Livestock Sanitary Board.

All sheep shipped or trailed into the State must be quarantined at the nearest practical place to their point of unloading or entry. The sheep will be quarantined upon an area consistent with good sanitation, and which will not endanger or contaminate the range of sheep which are not under quarantine or the trails used in the moving of such sheep, or the water places frequented by sheep not held under quarantine.

Sheep trailed into the State must be held at the State lines unless accompanied by a trail permit issued by the Montana Livestock Sanitary Board.

Sheep shipped in by a common carrier must be shipped in clean and disinfected cars and must be held in the railway stockyards or premises until permission is granted by the Montana Livestock Sanitary Board to remove them from the railway stockyards or premises to the place of quarantine.

The owner of the sheep or his agent must give the State veterinary surgeon at Helena at least five days' notice in writing of the time and place of arrival, and number and character of sheep in the shipment.

All imported sheep when placed in quarantine must be branded with red paint on the right side of the back with the letter "S."

Sheep shipped from a public-sale yard which are not dipped at that point and accompanied by a Federal dipping certificate must be dipped twice at the first available point after unloading or trailing into the State, and must be quarantined and otherwise comply with the regulations governing imported sheep, the quarantine period to date from the date of second dipping.

All rams and purebred sheep shall be dipped twice: *Provided, however,* That purebred sheep shipped by express or in disinfected cars or in box cars which have not contained other sheep shipments and which are not unloaded en route or loaded through public stockyards need not be dipped, but must otherwise comply with the regulations governing imported sheep.

Rams and purebred sheep shipped into the State of Montana must be quarantined in one lot or band for not less than 90 days and until they have been inspected and released from quarantine: *Provided, however,* That one or more Montana sheep owners shipping bucks in the same car or cars may have their bucks quarantined on their individual ranches.

Rams, purebred sheep, and other sheep shipped into the State for sale or distribution must be quarantined in one lot or band for not less than 90 days and until they have been inspected and released from quarantine: *Provided, however,* That sheep shipped into the State of Montana for sale or distribution may be dipped twice under official supervision after their arrival in Montana and then distributed to individual ranches and quarantined on such ranches for not less than 90 days and until inspected and released from quarantine.

Purebred sheep shipped in disinfected cars or in crates by express and not loaded or unloaded through public loading yards, when accompanied by an affidavit that the sheep have been continuously on the ranch from which they were shipped for the nine months next preceding the date of shipment, and accompanied by an official certificate of health certifying that the sheep are from a district in which sheep scabies has not existed in the preceding nine months, and are free from scabies and any symptoms of an infectious or contagious disease, may be sold at public auction and distributed to individual ranches without dipping, but shall be subject to a 90-day quarantine on the individual ranch to which they are originally consigned from the public sale.

When it is necessary to turn native sheep in with quarantined imported rams, the native sheep must likewise be quarantined and comply with the regulations governing the imported sheep. When native sheep are mixed with quarantined imported rams the owner or agent of the sheep will forward notice to the State veterinary surgeon at Helena immediately, stating the number of animals added to the quarantined rams.

Animals for immediate slaughter.—The provisions of this regulation requiring certain tests and health charts shall not apply to animals or poultry for immediate slaughter (not longer than 10 days after their arrival in the State) provided such shipments are shipped to a recognized stockyard or abattoir where Federal inspection is maintained or are accompanied by a statement from the owner or his agent that the animals or poultry are for immediate slaughter and will be slaughtered within 10 days after their arrival at destination and a copy of such statement forwarded to the State veterinary surgeon at Helena.

Animals for immediate slaughter may be shipped to a recognized public stockyard or abattoir where Federal inspection is maintained, in accordance with the regulations of the United States Bureau of Animal Industry.

Disinfection of cars.—Disinfection of cars does not apply to box cars which have not been previously used for stock shipments.

Single-deck cars which have not been previously used for sheep shipments may be used without being disinfected for the same use, provided they are thoroughly cleaned and freshly sanded.

Box cars and cars other than stock cars that have not contained stock shipments are not subject to disinfection requirements.

Poultry.—No restrictions, except as provided in introductory paragraph.

Dogs.—All dogs shipped into the State for any purpose whatsoever, except performing dogs for temporary stay within the State, must be accompanied by a statement from the State or Government health officer or the State veterinary surgeon certifying that rabies has not existed for the last nine months within a radius of 50 miles of original shipment, and also a statement from the owner or agent of the animals that the dog or dogs are free from disease, and have since birth or during the last nine months been at all times within the radius designated by the official health officer or State veterinary surgeon and have not been exposed to rabies.

Dogs which can not comply with these requirements may be shipped into Montana when accompanied by an official health certificate showing them to be free from infectious or communicable diseases, and certifying that they have been vaccinated with killed rabies vaccine not more than 12 months and not less than 30 days prior to date of shipment.

Original statement or health certificate must accompany shipment, and a copy be immediately forwarded to the State veterinary surgeon, Helena.

Serum and biologics.—Serums and biologics intended for diagnostic or therapeutic purposes with animals shall not be sold, distributed, or used within the State or imported into the State for sale, distribution, or use unless such serum or biologic has been produced under a license granted by the Bureau of Animal Industry of the United States Department of Agriculture.

All manufacturers of biological products and dealers are hereby prohibited from shipping any virulent blood or living virus of any disease affecting livestock into the State, unless written permission for each shipment is granted by the Montana Livestock Sanitary Board and no living virus shall be distributed or used within the State unless permission in writing shall first be obtained from the Montana Livestock Sanitary Board, Helena, for the distribution and use of such virus.

Certificates.—Health certificates and test charts are good for 30 days. Test charts for show herds are good for 90 days. The original certificate must accompany shipment to its destination, and a duplicate must be forwarded immediately by the veterinarian making the inspection or test to the State veterinary surgeon.

Tests accepted.—Any test approved by the United States Bureau of Animal Industry will be accepted.

Who may inspect.—Any veterinarian approved or accredited by the United States Bureau of Animal Industry.

Official.—State veterinary surgeon, Helena.

NEBRASKA

Horses, mules, and asses.—Official health certificate for all horse stock, including a record mallein test for stallions and jacks certifying that the animals described on certificate have been examined, and when required mallein tested within 60 days prior to the date of importation, and found to be free from any symptoms of glanders or any other contagious, infectious, or communicable disease.

Cattle.—Cattle for breeding and dairy purposes (to include all cattle of recognized dairy type or breed), official health certificate and tuberculin-test chart certifying that the cattle described on certificate and chart have been examined and tuberculin tested within 60 days prior to date of shipment and found to be free from tuberculosis and symptoms of other dangerous, contagious, infectious, or communicable disease: *Provided*, That (1) cattle immediately preceding shipment from a herd officially accredited tuberculosis free, and cattle from a herd located immediately at time of shipment within an area certified officially as a modified tuberculosis-free area,

which herd on last test passed without reactors, may be imported without additional tuberculin test, but shall be accompanied by an official health certificate and statement certifying origin in keeping with these provisions; (2) cattle for exhibition purposes may be imported on tuberculin test dated 120 days preceding date of importation.

Steers and strictly range cattle, official health certificate, but when direct from a range herd of another State where inspection and physical examination are impracticable, importation may be made subject to inspection at destination under special permit had and obtained from the Nebraska Bureau of Animal Industry.

Cattle for immediate slaughter to be reported by importer, giving Nebraska destination and record of slaughter, except for cattle destined to Union Stock Yards, Omaha.

Female cattle for feeding and grazing purposes, official health certificate, subject to quarantine at Nebraska destination and to be kept separate and apart from breeding and dairy cattle.

NOTE.—Cattle imported under breeding and dairy provisions are subject to 60-day retest at discretion of the Nebraska Bureau of Animal Industry.

Swine.—Swine except for immediate slaughter, official health certificate including statement showing same to have been immunized with anti-hog-cholera serum, provided special permission has been granted for treatment with serum at Nebraska destination. Immunization with anti-hog-cholera serum, provided special permission has been granted for treatment with serum at Nebraska destination. Immunization with anti-hog-cholera serum to be made in keeping with the following restrictions:

(a) Swine immunized by serum-alone method to be treated not more than 21 days immediately prior to date of importation. Swine immunized by simultaneous method will be quarantined for a period of 21 days following arrival at Nebraska destination provided treatment has been made less than 21 days immediately preceding the date of shipment of the swine into Nebraska. Certification of immunization to be by veterinarian on official health certificate, or by sworn statement of owner or shipper stating that the swine imported have been so treated, setting forth date and by whom treatment was made.

(b) Swine immunized at public stockyards where Federal inspection is maintained shall be quarantined for a period of 21 days on arrival at destination, to be kept separate and apart during such period from other swine not similarly treated.

(c) Except swine for feeding purposes, treatment with anti-hog-cholera serum must precede the shipment into the State. Swine for feeding purposes only may be imported subject to treatment with anti-hog-cholera serum on arrival at Nebraska destination, but such swine will be subject to quarantine for 21 days and must be loaded direct into cleaned and disinfected cars without contact with railroad shipping yards except where same have been cleaned and disinfected in preparation for shipment.

Swine for feeding purposes under these provisions may be imported only on permit from the Nebraska Bureau of Animal Industry had and obtained prior to shipment.

Swine for immediate slaughter or any other purposes may be moved without restriction to a market where Federal inspection is maintained.

Sheep.—Official health certificate, including a statement of inspection showing the animals to be free from scabies or any other contagious, infectious, or communicable disease: *Provided*, That where such inspections are impracticable for sheep from range flocks or bands for feeding purposes only, the same may be imported subject to inspection at destination, this to be on permit had and obtained from the Nebraska Bureau of Animal Industry prior to shipment.

Who may inspect.—Federal or regularly employed State veterinarians, or practicing veterinarians approved by the United States Bureau of Animal Industry and State officials for tuberculin testing of livestock for interstate shipment. Health certificates are to be indorsed by the livestock sanitary officials of the State of origin.

Change in regulations.—Regulations subject to change at any time necessity demands.

Special notice to railroads.—Except when special permit is had and obtained for inspection of livestock at their Nebraska destination, railroad officials shall under no circumstances accept livestock for shipment into Nebraska unless accompanied by proper health certificate and tuberculin or mallein-test chart as required.

Official.—Chief, Nebraska Bureau of Animal Industry, Statehouse, Lincoln.

NEVADA

General requirements.—The term "official health certificate" means a certificate setting forth in detail facts called for and issued by officials authorized to inspect and must be upon official forms issued by the United States Bureau of Animal Industry or the livestock sanitary authorities of States of origin.

A copy of each health certificate, affidavit, or permit, where required, must be attached to the waybill or be in the possession of the person in charge of the stock moving into the State if by other means than by rail, and one copy of health certificate or affidavit must be forwarded to the State quarantine officer so as to reach him before the arrival of the stock at destination.

Horses, mules, and asses.—Official health certificate showing freedom from any evidence of glanders, dourine, or other communicable diseases and external parasites, based on a thorough physical examination.

Cattle.—No cattle of any age or class shall be shipped, driven, or transported into the State for any purpose whatsoever except on a permit obtained from the State quarantine officer in advance of entering the State. Such permits may be granted upon application made in accordance with certain provisions of the regulations. Full information concerning those provisions should be obtained from the State official. All permits so granted shall cover the movement of the cattle involved only to the point of destination specified therein where they are to be held until released by the State quarantine officer in writing after such inspection or tuberculin test as he may deem advisable.

If on inspection at destination by the State quarantine officer or his representative the cattle covered by any permit are found to belong in a class other than as set forth in the application for the permit, they will be automatically reclassified and become subject to disposition in accord with the classification in which they actually belong, as set forth in the regulations.

For dairy and breeding cattle, including all bulls for use on the open range, application for permit shall be accompanied by a waiver of indemnity prepared after the following form:

In consideration of being permitted to bring the _____ head of dairy or breeding cattle covered by the health certificate to which this waiver is attached, into the State of Nevada, I or we do hereby agree:

First, to hold the said cattle at _____, Nevada, their destination, in quarantine properly isolated from contact with other cattle subject to inspection or tuberculin test until their release in writing by the State quarantine officer.

Second, that in the event that any of the said cattle shall within 70 days after their arrival at destination react to any recognized form of tuberculin test, they shall be at once returned to the point of origin if allowable by law or destroyed without the payment of any indemnity by the State of Nevada, as directed by the State quarantine officer.

Signed _____,
Owner,
 P. O. address _____.

Witnessed by _____,
 P. O. address _____.

In addition the animals shall be accompanied by an official health certificate showing them to be free of any evidence of tuberculosis or other contagious, infectious, or communicable disease and to be from a herd or herds showing not more than 10 per cent of tuberculous cattle, based upon an individual physical examination and a tuberculin test of the entire herd or herds.

When the subcutaneous method of applying the tuberculin test is used the chart shall show that at least three temperatures were taken 2 or 3 hours apart before injection of tuberculin; that at least seven temperatures were taken 2 hours apart after the injection, beginning not later than 8 hours after the injection of tuberculin; and that the test had run for a period of not less than 20 hours after the injection.

When the intradermic test is used the chart shall show that an observation made not earlier than the ninety-sixth hour has failed to show any evidence of a reaction.

For cattle from a tuberculosis-free accredited herd or a modified accredited area under the supervision of the United States Bureau of Animal Industry, and the State of origin, application for permit shall be accompanied by a waiver of indemnity against the

State of Nevada executed as set forth above and an official health certificate from an inspector of the United States Bureau of Animal Industry or the authorities of the State of origin showing the cattle to be free from such a herd or area and that they have not been exposed to infection by tuberculosis since leaving the herd of origin.

For cattle for feeding or grazing purposes only—that is, cattle to be fed in yards or grazed on inclosed premises for a limited period only—application for permit shall state the number, sex, age, and point of origin of the cattle, also the length of the proposed feeding period, location of premises where cattle are to be fed, and disposition at end of feeding period.

For cattle which have reacted to the tuberculin test, application for permit shall be accompanied by evidence that the regulations of the United States Bureau of Animal Industry have been complied with and full details as to the purpose of the shipment.

For cattle for immediate slaughter, application shall be accompanied by a statement as to the number and description of the cattle and the name and address of the establishment where they are to be slaughtered.

For strictly range cattle—that is, branded animals of the recognized beef type only which have been born and reared under range conditions—application for permit shall contain a statement as to the number, ages, sexes of the cattle, and the location of the range on which they originated; also the range on which they are to be turned after arrival at destination.

The entire State is now included in the classifications of modified accredited area or tuberculosis-eradication area. The rules and regulations approved by the United States Livestock Sanitary Association and the United States Bureau of Animal Industry governing such areas, therefore apply to the entry of cattle into any part of the State, with, in some instances, additional requirements as above, including in all cases a permit to be obtained in advance.

Swine.—Purebred swine for breeding or exhibition purposes may be imported in crates by express upon affidavit of the owner that he is the breeder or owner, that they are purebred animals for breeding or exhibition, that they are not affected with hog cholera and have not been exposed thereto for at least 60 days nor been given the serum-and-virus treatment within 30 days, and that immediately before shipment they

were dipped in a 2 per cent solution of compound cresol U. S. P. or other standard solution of equal strength.

Swine from public stockyards may be imported in accordance with Federal regulations. Such swine will be held in quarantine at destination until released by the State quarantine officer.

Swine for immediate slaughter may be brought in without inspection provided they are consigned direct to a slaughtering establishment, the waybills are marked for immediate slaughter, no part of the shipment is diverted en route within the State, and they are slaughtered within a reasonable time.

For swine not belonging to the above-named classes a permit must be procured from the State quarantine officer. Application for such permit must give name of shipper, point of origin, number of animals, method of transportation, name of consignee, and destination. Such animals will be quarantined at destination until released by the State quarantine officer.

Other classes of livestock.—Livestock (except sheep and goats) not provided for above may enter only on special permit from the State quarantine officer.

Who may inspect.—Federal veterinarians, livestock sanitary authorities of States of origin, or inspectors jointly approved by the United States Bureau of Animal Industry and such State authorities for making interstate inspections in accordance with Federal regulations.

Official.—State quarantine officer, Reno.

Sheep.—All persons intending to bring sheep into Nevada in any manner, except by shipping them through the State by railroad, shall, 10 days before crossing the State line, notify the board, at its office, of such proposed action, which notice shall set forth the place and date of entry into the State, the number of sheep or bucks, the marks or brands thereon, the name of the owner or owners thereof, the locality from which sheep came and through which they have been driven.

All sheep entering Nevada shall be accompanied by a health certificate, issued by a duly authorized sheep inspector, or by an inspector of the United States Bureau of Animal Industry, certifying that the sheep are free of disease or exposure thereto and are from a district in which sheep scabies has not existed for the preceding six months. Sheep not accompanied by the above-described certificate shall be dipped twice,

both dippings to be performed under the supervision of an authorized sheep inspector and within 24 days after the entry of the sheep into the State.

Notice to be sent to State board of sheep commissioners, Box 782, Reno.

Official.—Secretary, State board of sheep commissioners, Reno.

NEW HAMPSHIRE

Horses, mules, and asses.—Health certificates showing them to be free from contagious and infectious diseases and nonparasitic.

Cattle.—Health certificate and permit, including the tuberculin test, as recognized by the United States Bureau of Animal Industry, for all cattle.

NOTE.—Permits allowing shipments will be issued on receipt of test charts approved by the proper livestock sanitary officials of the State in which the shipment originates or signed by a qualified inspector of the United States Bureau of Animal Industry. No permit will be granted until all cattle have successfully passed a satisfactory tuberculin test in a herd under State and Federal supervision where no reactors were found on last test, said test made within three months prior to animals being shipped into the State.

All cattle which have been tested in any way to determine if they suffer from Bang's disease and have given a positive or suspicious reaction to such a test shall not be shipped, trailed, or otherwise moved into the State.

Swine.—Health certificate stating freedom from hog cholera and other infectious diseases based on a physical examination made by a qualified inspector.

Sheep.—No restrictions.

Who may inspect.—Veterinarians approved by proper livestock sanitary officials of the State of origin or a United States Bureau of Animal Industry inspector.

Officials.—Commissioner of agriculture, division of animal industry, Concord; State veterinarian, Concord.

NEW JERSEY

Horses, mules, and asses.—Must be free from infectious and contagious diseases.

Cattle.—(a) Cattle for immediate slaughter may be shipped only to public stockyards or recognized slaughtering centers where Federal inspection is maintained.

(b) The importation of neat cattle for immediate slaughter is prohibited except as provided in paragraph (a), unless permission for such importation in writing is obtained from the chief, bureau of animal industry, Trenton, at the time shipment is made.

(c) Bulls, cows, and heifers for immediate slaughter, when not consigned to public stockyards or recognized slaughtering centers where Federal inspection is maintained, must be accompanied by a tuberculin-test chart approved by the State sanitary official and Federal representative in the State in which the cattle were so tuberculin tested, covering test made in accordance with the regulations adopted by the New Jersey Board of Agriculture, as outlined in the following regulations:

(d) Dairy and breeding cattle consigned to New Jersey points must have been previously tuberculin tested in a herd in which all the animals were negative on the last test made under State, Federal, or foreign government supervision. If the herd is operating under the individual-herd plan, such previous test must have been made within one year of the date of shipment; if from a herd tested in a modified accredited area, previous test shall have been made within three years of the date of shipment. These facts must be certified to by the State veterinarian, Federal representative, or veterinary director general of the State or foreign country in which the cattle originate by the issuance of Federal T. E. Form 22, or similar form, giving the date of previous test under supervision and the number of animals tested, such test to include the particular animal or animals to be consigned.

(e) If each animal is found to comply with the requirements as stated in paragraph (d), they are eligible for shipment direct from point of origin to New Jersey points, provided they are tested by either the subcutaneous method or double intradermic method (high and low injections) by a regularly employed State or Federal veterinarian or by an accredited veterinarian within 30 days of the date of shipment. Such test for shipment, however, shall not be made within 60 days of the date of the previous test made under supervision as outlined in the previous paragraph. The ophthalmic test may be used in combination with either the subcutaneous or intradermic methods.

(f) The test for shipment of all animals from herds operating under the individual accredited-herd plan or from modified accredited areas must be made within 30 days of the date of shipment.

(g) Dairy and breeding cattle not complying with the provisions of paragraphs (d), (e), and (f) are not eligible for entry into New Jersey.

(h) All shipments of dairy and breeding cattle are to be held in quarantine on arrival at destination until inspected and released by a representative of the New Jersey Bureau of Animal Industry.

(i) Within three days immediately after the arrival of the cattle at their destination within the State, the owner shall notify by telephone or telegraph the chief, New Jersey Bureau of Animal Industry, and hold the animals in quarantine until inspected and released by a representative of the New Jersey Department of Agriculture.

(j) Dairy and breeding cattle originating in any public stockyard or other point designated as a public sales stable or sales yard are not eligible for entry into New Jersey.

(k) Cattle not identified by registration number and name shall be identified by a proper, approved, metal ear tag.

(l) Dairy and breeding cattle which have at any time given a positive reaction to the agglutination test or any other approved method of testing for Bang abortion disease, recognized by the State board of agriculture, are not eligible for entry into New Jersey unless consigned for immediate slaughter to a public stockyard where State or Federal inspection is maintained.

(m) All dairy and breeding cattle, including calves six months of age or over, destined for New Jersey points must pass an agglutination or other approved test for Bang abortion disease made within 30 days of the date of shipment except when consigned for immediate slaughter to public stockyards where Federal or State inspection is maintained.

(n) Agglutination tests of dairy and breeding cattle will not be accepted if made within 21 days after calving. Such tests must be conducted in dilutions 1-25, 1-50, 1-100, and 1-200 in an approved laboratory operated under the direct supervision of the State university, agricultural college, experiment station, or livestock sanitary organization.

(o) The original report of the agglutination test carrying the approval of the livestock sanitary official shall be forwarded to the chief, bureau of animal industry, Trenton. A duplicate copy shall be attached to the waybill and accompany the animals in transit.

(p) All dairy and breeding cattle, including calves six months of age or over, which have received an injection of any biological or chemical product or any other preparation given for immunization purposes or to reduce or prevent reaction to the agglutination or any other recognized test for Bang abortion disease are not eligible for entry into New Jersey.

(q) Dairy and breeding cattle not complying with the provisions of paragraphs (m), (n), (o), and (p) are not eligible for entry into New Jersey.

Swine.—(a) Swine for immediate slaughter may be shipped into the State when consigned to designated slaughter establishments where Federal inspection is maintained.

(b) Swine for immediate slaughter may be shipped into New Jersey on special permit obtained from the chief, New Jersey Bureau of Animal Industry, Trenton, to points where Federal inspection is not maintained, and slaughtered under State or municipal inspection.

(c) Swine for feeding or breeding purposes may be imported into New Jersey when said swine have been immunized with a protective dose of anti-hog-cholera serum or serum and virus prior to date of importation, provided they are moved in clean and disinfected cars or vehicles.

Such shipment must have copy of the veterinarian's certificate of inoculation attached to the waybill and a copy forwarded immediately to the chief, New Jersey Bureau of Animal Industry, Trenton.

(d) Request for the importation, into New Jersey, of untreated swine from points other than public stockyards for feeding or breeding purposes must be made to the chief, New Jersey Bureau of Animal Industry, Trenton.

When such permit is granted the swine shall be moved in clean and disinfected cars or vehicles, held in quarantine at destination, and immediately treated with a protective dose of anti-hog-cholera serum and hog-cholera virus. Report of same shall be made at once to the chief, New Jersey Bureau of Animal Industry, Trenton, on blanks supplied by the bureau, in accordance with the requirements of the New Jersey Board of Agriculture.

Sheep.—Must be free from any contagious, infectious, or communicable disease.

Official.—Chief, New Jersey Bureau of Animal Industry, Trenton.

NEW MEXICO

Horses, mules, and asses.—Health certificate.

Cattle.—Health certificate, a permit to enter, and tuberculin test for dairy cattle and cattle intended for the breeding of dairy stock, and retest 90 days after reaching destination, also blood test for Bang's abortion disease. Cattle entering modified accredited areas in New Mexico to comply with Federal requirements.

Any bulls shipped into the State of New Mexico, to be used for range purposes, must be accompanied by a permit from the cattle sanitary board, Albuquerque, and also a certificate from a State-recognized inspector or veterinarian, or an inspector of the United States Bureau of Animal Industry, showing said shipment of bulls to have been dipped in some recognized scabies dip not more than 10 days prior to shipment, copy of certificate to be mailed to the cattle sanitary board, Albuquerque.

Swine.—Subject to laws of 1915, 1917, and 1919. Details may be obtained from the cattle sanitary board, Albuquerque.

Official.—Secretary, cattle sanitary board, Albuquerque.

Sheep.—Any person intending to bring sheep into New Mexico shall give notice to the sheep sanitary board at its office in Albuquerque by registered letter or telegram, or by delivery in person, so that said notice shall be received at least 48 hours before the proposed day of entry. Permission shall then be issued to import such sheep provided they are accompanied by a certificate of a regularly commissioned sheep inspector of the State of origin or an inspector of the United States Bureau of Animal Industry certifying that said sheep are free from scabies or exposure thereto: *Provided, however*, That rams entering the State for breeding purposes shall, under the direction of inspectors of the sheep sanitary board, after arrival, be required to receive two dippings under supervision, 10 to 14 days apart, such dippings to occur prior to the distribution or use of the rams.

All sheep, except as hereinafter provided for, which have entered the State for stocking purposes

are, under direction of inspectors of the sheep sanitary board, to be inspected and are to be placed under quarantine for a period of not less than 60 days, when they are again to be inspected and if found free from infection of scabies or exposure thereto, are to be released from quarantine.

It is provided, however, that at the option of the owner, incoming sheep may, under the direction of an inspector of this board, receive two dippings, 10 to 14 days apart, after entrance, and without quarantine.

Sheep in New Mexico which spend a portion of the time grazing in other States and which return to this State for a period of each year only and are, therefore, otherwise covered by inspection regulations, are not required under this order to undergo quarantine or dippings as herein specified.

An inspection fee of 3 cents a head must be paid for all classes of sheep and goats coming into New Mexico.

Who may inspect.—Sheep must be inspected by a Federal veterinarian before shipment and by State or Federal inspector at destination.

Official.—Secretary, sheep sanitary board, Albuquerque.

NEW YORK

The movement, into the State of New York, of domestic animals suffering from any contagious or infectious disease is prohibited, and persons bringing such animals into the State are held responsible.

Horses, mules, and asses.—Must be free from infectious and contagious diseases.

Cattle.—All cattle shipped into the State for dairy or breeding purposes must be accompanied by an interstate health certificate indorsed by the proper livestock official of the State of origin, showing that the cattle originated in an accredited herd tested within 12 months before shipment, a once-tested clean herd under supervision tested within 6 months before shipment, or a clean herd in a modified accredited area tested within 12 months before shipment. Cattle from other than one of the foregoing classes will be quarantined for at least 60 days pending a retest at the expense of the owner. The certificate must be legible and must show the correct name and address of the consignor and the consignee. It must indicate

the status of the herd; and if more than one herd is represented in the shipment, the status of each herd must be given.

All dairy and breeding cattle must pass a test for Bang abortion disease within 30 days before shipment into the State, or they must come from herds certified free from Bang abortion disease by the chief livestock official of the country, Province, or State of origin. The test must not be applied less than 21 days following abortion or parturition. The cattle must be accompanied by a health certificate approved by the chief livestock sanitary official, giving the name and address of the laboratory or person making the test. It must give a description of each animal, including ear-tag numbers of grades, and name and registration number of purebreds. Animals not in accordance with these requirements will be quarantined for 30 days for inspection and blood test. This order does not apply to cattle for immediate slaughter consigned to public stockyards, or steers and beef-type cattle for feeding and grazing purposes.

All female cattle and bulls shipped into the State for feeding and grazing purposes must be tuberculin tested before shipment. Steers for feeding and grazing purposes, when shipped into tested or quarantined townships or counties, must be tuberculin tested. No permit is required in advance of shipments.

Swine.—Swine must be free from contagious and infectious diseases. If shipped for purposes other than immediate slaughter, they must be in cleaned and disinfected cars, pens, etc. (See New York State Department Order No. 6, dated September 15, 1927.)

Sheep.—Sheep must be free from contagious and infectious diseases.

NOTE.—The commissioner may order any animals coming into the State to be detained at any place or places for inspection and examination, and if they are found to be affected with any communicable disease they shall be condemned and slaughtered or held in strict quarantine.

Who may inspect.—Federal, State, and county veterinarians, accredited veterinarians, and veterinarians authorized to test cattle for interstate shipment.

Official.—Director, bureau of animal industry, Albany.

NORTH CAROLINA

Horses, mules, and asses.—Health certificate issued by recognized qualified veterinarian not more than 30 days prior to shipment, showing freedom from any contagious or infectious disease; except that horses and mules may be brought in without such certificate if the owner quarantines the animals at destination until they have been examined by a veterinarian designated by the State veterinarian and are found free from any symptoms of communicable disease, a certificate to that effect signed by the veterinarian making the test to be sent to the State veterinarian. The cost of quarantine and examination shall be at the expense of the owner.

Cattle.—All cattle, except for immediate slaughter, health certificate, and tuberculin-test chart issued by a recognized qualified veterinarian. Test must comply with requirements of the United States Bureau of Animal Industry. Copies of test chart and health certificate must be attached to waybill.

Cattle from tuberculosis-free accredited herds or from herds under State and Federal supervision will be admitted if accompanied by a certificate issued by livestock sanitary officials of the State of origin or by the United States Bureau of Animal Industry certifying that the cattle are from such herds and have been tested within a reasonable time prior to shipment.

The health certificate covering cattle 6 months old and older, other than steers and those admitted for immediate slaughter and for exhibition purposes (exhibition cattle must pass satisfactory blood test for abortion if sold, traded, or otherwise disposed of within the State), must show that the animals have satisfactorily passed a blood test, for bovine infectious abortion, made by a recognized laboratory not more than 21 days prior to entry into the State and not less than 15 days following abortion or normal parturition. The date of test, results, and name of laboratory must be given.

Cattle from herds in which all animals have passed two negative tests under State supervision may be shipped on certificate of last test if made within six months and approved by proper State official.

Cattle for immediate slaughter may be shipped into the State without health certificate or test chart if

consigned to a person holding a permit from the State veterinarian to receive them.

Swine.—If for feeding, breeding, sale, or show purposes, a health certificate from a qualified veterinarian stating that the hogs are free from symptoms of any communicable disease and that each animal has been properly treated with serum alone not more than 30 days or with serum and virus not less than 21 days prior to the shipment is necessary. The original certificate must be attached to the waybill and a copy forwarded to the State veterinarian, Raleigh. In an emergency the State veterinarian may permit healthy swine to be brought in for feeding, breeding, sale, or show purposes without immunization, provided the following requirements are strictly complied with:

(a) A permit must be obtained from the State veterinarian before shipment is made.

(b) Swine must be apparently healthy and must be shipped in clean cars.

(c) They must be isolated at destination.

(d) They must be properly immunized on arrival at destination and held in quarantine at least 21 days.

(e) They must be dipped in a permitted disinfectant before being released from quarantine.

Purebred swine shipped by express must comply with the foregoing requirements or be accompanied by an affidavit of owner stating that the swine are not affected with a communicable disease, have not been exposed to a communicable disease, that no such disease has existed on the premises for a period of 3 months prior to shipment, and that the swine have not been treated with serum and virus within 30 days.

Swine from central markets or public stockyards for purposes other than immediate slaughter will be admitted only when shipped in compliance with the regulations of the United States Bureau of Animal Industry and when shipments are made within 24 hours after immunization. Such shipments must be held in quarantine at destination not less than 21 days from date of immunization. Permits for such shipments must be obtained by applying in writing to the State veterinarian.

Swine for immediate slaughter will be admitted without restrictions if consigned to a recognized slaughtering center that has been approved by the State veterinarian. Waybills must be marked "For

immediate slaughter" and the swine must not be used for any purpose other than immediate slaughter.

Sheep.—For breeding purposes, health certificate.

Who may inspect.—State veterinarian or any veterinarian whose certificate he will indorse, also Federal inspectors.

Official.—State veterinarian, Raleigh.

NORTH DAKOTA

Horses, mules, and asses.—Health certificate, including mallein-test record, must be made within 30 days prior to entering the State. Stallions should also be accompanied by certificates showing animals to be free from unsoundness, certificates of soundness for stallions to be forwarded to the stallion-registration board, Agricultural College.

Cattle.—All cattle entering the State must be accompanied by a certificate of health indicating that they are free from any symptoms of communicable diseases.

All cattle that can be used for breeding or dairy purposes must be tuberculin tested within a period of 30 days of date of shipment and be accompanied by proper tuberculin-test chart and health certificate, provided that cattle originating from a regularly Federal-State accredited tuberculosis-free herd will be admitted within a year of date of last test to conform with Federal regulations, and accompanied by proper test-chart health certificate: *Provided*, That cattle originating from a modified accredited area, properly identified, certified to, and approved by the official in charge of livestock sanitary control work, may be admitted without further test. All cattle, male or female, and steers, for feeding purposes, must have been tuberculin tested and be accompanied with a health certificate, unless originating from accredited herds or from modified accredited area and properly certified to.

Exceptions may be made to strictly range cattle admitted by permit for feeding purposes.

All purebred cattle transported or driven into the State that have originated from other than Federal-State officially accredited tuberculosis-free herds must, after arrival at destination, be held segregated from other cattle for a period of not less than 60 days nor more than 90 days and be retested under the direction or approval of the livestock sanitary board.

The subcutaneous or thermal tuberculin test applied in conformance with the Federal rules for applying the test and applied by approved veterinarians will be recognized, provided calves under 6 months of age may be tested by the intradermic method to comply with Federal regulations.

The intradermic tuberculin test applied in conformance with the Federal rules for such tests and made by accredited veterinarians will be recognized, provided that animals reacting to such test must be rejected.

No cattle over 6 months of age for breeding or dairy purposes shall be moved into North Dakota unless they have passed a satisfactory negative agglutination blood test for Bang's disease within 60 days prior to the date of importation, except such cattle originating from herds officially designated and certified to by an approved veterinarian as being free from infection. The blood test must be approved by a laboratory approved by the livestock sanitary authorities in State of origin, exceptions being made in certain instances by the executive officer of the livestock sanitary board.

Cattle must be accompanied by a health certificate, including the date of satisfactory negative test, copies of health certificate, certified to and approved by the livestock sanitary authorities in the State of origin. They must be immediately forwarded to the State veterinarian, Bismarck.

No breeding or dairy cattle that have given a positive or suspicious reaction to any blood test for contagious abortion or are known to be affected with that disease shall be admitted to North Dakota for any other purpose than immediate slaughter. When so admitted the animals must be consigned to either the Northern Packing Co., Grand Forks, or Armour & Co., West Fargo, and the waybills must be marked "For immediate slaughter."

Swine.—Health certificates stating that no infectious swine disease exists or has existed in the locality from which the swine originated within 6 months prior to date of shipment, unless the swine are certified by a duly accredited Federal or approved veterinarian as having been immunized by the Dorset-McBryde-Niles anti-hog-cholera serum only, within 30 days of shipment or have been immunized by the Dorset-McBryde-Niles anti-hog-cholera serum and hog-

cholera virus applied not less than 30 days before date of shipment.

Swine brought into the State for exhibition purposes at State or county fairs must be immunized in accordance with the above provisions and be accompanied by certificate to such effect.

Purebred swine shipped by express in crates will be admitted if accompanied by affidavit of shipper approved by the State official in charge to the effect that such swine are free from disease and have not been exposed to hog cholera within a period of six months.

Sheep.—Health certificate indicating that animals are free from any symptoms of scabies or lip-and-leg ulceration, or exposure thereto, within 30 days prior to shipment.

Dogs.—All dogs shipped or moved into this State for any purpose whatsoever, except performing dogs for temporary stay within the State, must be accompanied by a health certificate issued by an approved veterinarian in the State of origin stating that rabies has not existed for the last nine months within a radius of 50 miles of origin of shipment, and that said animals are free from symptoms of any disease.

When this requirement can not be complied with, dogs will be admitted into the State if accompanied by an official health certificate showing they are free from disease and have been vaccinated with killed rabies vaccine within a period of six months.

Who may inspect.—Veterinarians approved by the United States Bureau of Animal Industry to issue health certificates for cattle moving interstate.

Duplicates of all certificates must be forwarded immediately to the livestock sanitary board, Bismarck. Inspections made by veterinarians failing to comply with these requirements will be refused recognition.

All tests and inspections must be made within 30 days of shipping of stock, unless originating from Federal or State officially accredited tuberculosis-free herds, excepting cattle originating in modified accredited areas.

Official.—State veterinarian, Bismarck.

OHIO

Horses, mules, and asses.—No restrictions.

Cattle.—The Federal regulations shall apply to the movement of all cattle into the State.

Dairy and breeding cattle shall be accompanied by a tuberculin test made not earlier than 60 days preceding the date of shipment, except as provided herein for cattle from an accredited herd or modified accredited area. The intradermic test will be accepted and recognized when such test is applied by Federal, State, or an accredited veterinarian experienced in making such test, and the test chart shall show at least one observation made not earlier than the seventy-second hour after injection and no reactors obtained in the cattle intended for shipment. Cattle originating from a herd or herds in which reactors were found may be held in quarantine at the owner's expense, at the discretion of the State department of agriculture, pending a retest.

Cattle from an accredited herd shall be accompanied by a certificate issued by a State veterinary inspector or Federal veterinary inspector showing the cattle to be from such a herd. The official certificate of tuberculin test shall show a description of the cattle, the method of test used, and the number of the accredited-herd certificate.

Cattle from a modified accredited area which shall originate immediately at the time of shipment from a herd in such area which on the last official tuberculin test passed without any reactors being found shall be accompanied by an official certificate of tuberculin test, and such certificate shall show a description of the cattle, the method of test, and an indorsement that the cattle have originated from such an area, and such other information as shall be required on the certificate.

A copy of the certificate of tuberculin test shall in all cases be forwarded to the department at the time of or immediately preceding the shipment.

Steers and strictly range cattle for feeding or grazing purposes may be shipped, transported, or otherwise moved into Ohio and the bureau inspector at a public stockyard is authorized to release for shipment such cattle for Ohio: *Provided, however,* That a report is immediately made to the department. Shipments of cattle of this class not originating in public stockyards may be moved into Ohio, provided they are accompanied by a certificate of health issued by an approved veterinarian showing that they are free from infectious and contagious diseases. The report or certificate from the bureau and approved veterinarian shall give the number of cattle and the breed,

also whether heifers or cows, and the name and address of the consignee.

Cattle for immediate slaughter may be shipped, transported, or otherwise moved into Ohio to a place where Federal, State, or city meat inspection is maintained, or to a place which has been designated by the department. The bureau inspector at a public stockyard is authorized to release such shipments for Ohio.

Bull calves of the beef breeds under 6 months of age may be moved into Ohio for feeding and grazing purposes, provided the owner makes a written declaration that the animals will be castrated within 10 days after destination is reached. One copy of the certificate or declaration shall accompany the shipment, one copy shall be mailed to the department.

Semirange, female cattle of the beef breeds may be moved into Ohio from public stockyards for feeding and grazing purposes if the owner or his agent obtains permission from the Federal inspector in charge of said yards, or from other points, provided the owner obtains a certificate from the Federal veterinarian or the veterinarian approved by the bureau and the State of origin which shall certify that he has inspected the cattle and that they are of the semirange type and free from symptoms of infectious and contagious diseases. A copy of the certificate giving the number of cattle, breed, also whether heifers or cows, and the name and address of the consignee shall be sent immediately preceding or at the time of shipment to the department.

All dairy or breeding cattle over the age of 5 months, with the exception of cattle from Bang abortion-free, accredited herds, must pass an agglutination blood test approved by the State livestock sanitary board of State of origin within 30 days prior to date of importation. Test will not be accepted if made in less than 15 days after animal has calved. Date of test and results must be shown on forms for that purpose or on tuberculin health certificates. Certificates or test charts must be made to conform with United States Bureau of Animal Industry regulations covering the interstate movement of cattle; the original to be attached to the waybill, a copy to be forwarded to the chief of the division of animal industry, Ohio Department of Agriculture, Columbus.

This regulation shall not be held to apply to cattle brought into the State from other States for exhibition purposes at State fair, district and county fairs,

or dairy-cattle congress, provided that in the event sales are made of such exhibition cattle to remain in the State of Ohio, such cattle so sold shall meet with the requirements of this regulation.

Inspectors of the United States Bureau of Animal Industry, veterinarians in the employ of the State, and veterinarians who are vouched for by the authorities in charge of the control of animal diseases in the State from which the animals are shipped may inspect and issue certificates as required in this regulation.

Swine.—All swine moved into Ohio for breeding purposes must be accompanied by a certificate that they have been immunized by the Dorset-McBrydeniles serum-alone method not more than 15 days prior to date of shipment and not less than 30 days prior to date of shipment when the simultaneous method is used. Swine for feeding purposes may be shipped into Ohio in accordance with the regulations issued by the United States Department of Agriculture.

Sheep.—All sheep shipped from public stockyards for purposes other than immediate slaughter shall be dipped under the supervision of an inspector of the United States Bureau of Animal Industry, except shipments for which permits have been obtained. Sheep originating from points outside of public stockyards must be examined and released by an approved veterinarian; copy of certificate of health must accompany shipment and one copy mailed to State veterinarian. Such shipments are subject to quarantine and inspection after arrival in Ohio.

Who may inspect.—Inspectors of the United States Bureau of Animal Industry, veterinarians in the employ of the State, and veterinarians who are vouched for by the authorities in charge of the control of animal diseases in the State from which the animals are shipped.

Official.—State veterinarian, Columbus.

OKLAHOMA

Horses, mules, and asses.—No restrictions.

Cattle.—All cattle must be accompanied by health certificate, including test chart of tuberculin test issued by the United States Bureau of Animal Industry, State, or accredited veterinarian, showing them to have been tested not more than 60 days before shipment, with the following exceptions: (a) Cattle

from accredited herds on certification by State or Federal veterinarian; (b) cattle from modified accredited areas on certification by State, Federal, or accredited veterinarian; (c) cattle consigned to public stockyards; (d) cattle for immediate slaughter when consigned to establishments having Federal inspection, or to such other slaughtering points as may be designated by the State veterinarian from time to time; (e) steers and strictly range cattle and female semirange cattle for feeding or grazing purposes only, and which are not to be disposed of, or used, for breeding purposes; and (f) cattle of immigrant outfits, on permit from the State veterinarian authorizing test at destination.

All the foregoing rules apply to cattle entering modified accredited counties in Oklahoma, plus the following:

Steers, strictly range cattle, and female semirange cattle for feeding or grazing purposes may enter modified accredited counties without tuberculin test only on permit first obtained from the State veterinarian of Oklahoma after premises at destination have been quarantined.

Dairy and breeding cattle six months of age and over must be accompanied by certificate showing freedom from infectious abortion, as determined by recognized laboratory tube test in three dilutions.

Bureau regulations will apply in the interstate movement of cattle affected with or exposed to scabies or ticks.

Swine.—Swine other than those for shipment to recognized market centers must be simultaneously immunized 21 days prior to shipment by a graduate veterinarian, certificate must be attached to waybill and copy sent to the State veterinarian; or, swine from other than public stockyards may be shipped into the State without immunization under the following conditions: A permit for each shipment must first be obtained from the State veterinarian, giving the owner's name and destination; the swine shall be treated by a graduate veterinarian with simultaneous inoculation method within 72 hours after arrival at destination. The swine shall be held in strict quarantine at destination for a period of 21 days.

Sheep.—No sheep shall be shipped, traileed, driven, or otherwise moved interstate from areas or premises quarantined for the disease of scabies except as provided for in the Federal regulations.

Poultry.—All chickens, four months of age or over, intended for purposes other than immediate slaughter must be subjected to tuberculin test certified to by an approved veterinarian.

Why may inspect.—State, United States Bureau of Animal Industry, and accredited veterinarians.

Official.—State veterinarian, Oklahoma City.

OREGON

General requirements.—Official health certificate means a certificate made on official forms from the State of origin or from the United States Bureau of Animal Industry by an official veterinarian. A copy of each health certificate, affidavit, or permit, where required, must be attached to the waybill or must be in possession of the truck or vehicle driver or person in charge of livestock if moved on foot. A copy of such certificate must be mailed to the chief of the division of animal industry, department of agriculture, Salem, in advance of the arrival of the livestock at destination.

No animal or poultry bird of any class which has been exposed to any dangerous infectious, contagious, or communicable disease from any territory that is quarantined or closed on account of such disease shall be admitted.

Horses, mules, and asses.—Health certificate, including complement-fixation or ophthalmic mallein test, if animals have been exposed to glanders. Animals for racing or exhibition purposes exempted from mallein-test requirement unless positively exposed. Stallions and jacks imported for public service shall, on their clinical health certificate, have enumerated such hereditary diseases, unsoundness, and conformation defects as may be observed, and such animals shall be subjected to an examination for soundness after arrival and license issued before being used for public service.

Cattle.—Health certificate, except for animals for immediate slaughter consigned to a public stockyard having Federal inspection, including intradermic or subcutaneous tuberculin test for all dairy and breeding cattle. Cattle from Federal-State accredited herds must be covered by certificate, together with number and expiration date of accredited-herd certificate. Cattle from a modified accredited area by the United States Bureau of Animal Industry cooperating with

the State, and cattle that immediately originate from a herd in such area which at the last official test was negative and in which previous tests had shown less than 1 per cent reactors, may be admitted under special permit without test. Animals must be covered by certificate signed by approved veterinarian covering these heretofore outlined requirements. Cattle for exhibition purposes may move into the State under Federal regulations when accompanied by an official health certificate and test chart showing such cattle to be from either accredited herds or free herds in accredited areas or must have been tested not more than 120 days prior to admission. All cattle for purposes other than dairy and breeding, moved into Oregon under Federal regulations, shall be covered by an official health certificate, except steers and strictly range cattle, which may be moved into the State under a special permit. Cattle for immediate slaughter not going to stockyards having Federal inspection may be moved in under permits and arrangements made for slaughter after arrival under proper supervision. Female cattle for feeding and grazing purposes and bulls for feeding purposes shall be quarantined at destination and branded "F" on right jaw and held apart from other cattle under quarantine until shipped to market or tuberculin tested and released.

No cattle shall be shipped, traileed, hauled, or otherwise moved into Oregon that have shown a positive or suspicious reaction to the blood agglutination or other test for infectious abortion unless the State veterinarian is notified and gives permission for the entrance, and the purchaser of such animal or animals is notified and fully advised, and the animal or animals are placed in a reactor herd.

Swine.—Health certificate, except for animals for immediate slaughter going to stockyards having Federal inspection. Swine moved into Oregon consigned to other than stockyards having Federal inspection must either have been immunized with anti-hog-cholera serum or shall be permitted entrance under exemption permit granted by the Oregon State Livestock Sanitary Board. Swine immunized by the serum-alone treatment shall be treated not more than 21 days prior to date of importation. Swine immunized by the serum-simultaneous treatment shall be treated not less than 21 days immediately preceding their importation, unless permit is given or swine have been

immunized under supervision of the United States Bureau of Animal Industry at stockyards and arrangements are made for proper quarantine after arrival at destination. Swine for breeding purposes may be admitted into the State to be immunized with anti-hog-cholera serum at point of destination and must have been loaded direct into a cleaned and disinfected car through cleaned and disinfected chutes or other conveyances. Swine of purebred breeding shipped into the State in crates for breeding purposes may be admitted without immunization and without inspection, provided the owner will execute a sworn statement showing the swine not to have been exposed to hog cholera or other infectious diseases covering a period of the past six months. The statement must be made in duplicate, one copy to be attached to the bill of lading and one copy to be sent to the State veterinarian. Unless otherwise ordered all swine exhibited at the Pacific International Livestock Show and the Oregon State Fair shall have been given the anti-hog-cholera immunization treatment in accordance with the above-stated requirements.

Sheep.—Range bucks from any other State must be dipped twice after arrival unless covered by affidavit from the owner showing that there has been no scab in the district from which the bucks originated for the last six months, and telegraphic or other information must come from the Federal inspector in charge confirming this statement.

Range sheep moved from any State where scab exists into Oregon for purposes other than immediate slaughter consigned to a yard having Federal inspection must be certified by a Federal veterinarian in charge of sheep-scabies-eradication work in the State of origin as originating in a territory free from sheep-scabies infection for the past 12 months. In addition, such sheep must be inspected by an official veterinarian, State or Federal, or a State-Federal approved practicing veterinarian.

Sheep coming from a scab-infected district must be certified by wire or letter showing such sheep to have been officially dipped once if exposed or twice if infected. All dipping must have been done in lime-and-sulphur dip under Federal supervision.

All bucks originating in any State where sheep scab has been present during the past 12 months must, before entrance into the State, in addition to the re-

quirements specified above, be dipped once unless exempted by Oregon order.

All certificates for importation or interstate movement of sheep must be approved by the United States Bureau of Animal Industry or authorized livestock sanitary official of the State of origin. Exhibition sheep consigned to the Oregon State Fair or the Pacific International Livestock Exposition are exempted from this order.

Goats.—Clinical health certificate or affidavit from owner stating that no infectious disease of goats has existed in locality of origin for the last six years.

Dogs.—All dogs originating in any State or Territory where rabies is known to exist must be accompanied by an affidavit from the owner that no rabies has been present within 25 miles of point of origin for the last three months, in lieu of which clinical health certificate from a veterinarian certifying to these requirements or certification that antirabic treatment has been given within one year from date of shipment.

Who may inspect.—Official veterinarian, State or Federal; graduate veterinarians when approved in writing by State veterinarian or like officer, except as to cattle, which must be inspected and tested according to Federal regulations, and sheep, which must be inspected by official veterinarians only, State or Federal.

Official.—Chief, division of animal industry, department of agriculture, Salem.

PENNSYLVANIA

No animal, including poultry, affected with a transmissible disease shall be brought into the Commonwealth except under quarantine and by special permit.

Horses, mules, and asses.—Must be free from transmissible diseases, as shown by physical examination.

Cattle.—No bovine animal, commonly called cattle, shall be brought into the Commonwealth except in accordance with the provisions of this section.

(a) Cattle coming from areas designated by the proper Federal and State livestock sanitary officials as modified accredited areas, or coming from herds designated by said officials as tuberculosis-free, accredited herds, may be brought into the Commonwealth with-

out being subjected to an additional tuberculin test prior to entry, if the cattle are apparently healthy and have been tuberculin tested within 15 months and are accompanied by a health certificate and tuberculin-test chart approved by the proper livestock sanitary official of the State from which the cattle are brought. An approved copy of the certificate and tuberculin-test chart shall be forwarded so as to reach the office of the department of agriculture, Harrisburg, before arrival of the cattle at destination.

(b) Cattle coming out of a herd that has passed a negative tuberculin test in process of accreditation under the accredited-herd plan or modified-area plan within six months of entry may be brought into the Commonwealth without additional tuberculin test prior to entry, if they are accompanied by a certificate of health and tuberculin-test chart approved by the proper livestock official of the State from which the cattle are brought certifying that the entire herd passed a negative test within six months. A copy of health certificate and tuberculin-test chart shall be forwarded so as to reach the department of agriculture, Harrisburg, before arrival of cattle at destination. If the entire herd shall have passed a negative test prior to six months of date of entry, the cattle to be brought in must be retested immediately prior to entry and accompanied by a health certificate and tuberculin-test chart approved by the proper livestock official of the State from which the cattle are brought and a copy forwarded as aforesaid.

(c) Dairy cattle that may be used for breeding, which do not come within the provisions of clause (a) or (b) of this section, may be brought into the Commonwealth if they are apparently healthy and are accompanied by a health certificate and tuberculin-test chart approved by the proper livestock sanitary official of the State from which the cattle are brought, showing that the cattle were tuberculin tested and passed immediately prior to their entry into the Commonwealth. An approved copy of the certificate and tuberculin-test chart shall be forwarded so as to reach the office of the department of agriculture, Harrisburg, before arrival of cattle at destination; or the aforesaid classes of cattle, if apparently healthy, may be brought into the Commonwealth without certificate of health and tuberculin-test chart provided they are billed to or through the public stockyards at Pitts-

burgh or Lancaster, where they shall be examined and tuberculin tested without a charge for the examining and testing. Stockyards companies shall provide clean and disinfected quarters for the cattle while undergoing the examination and tuberculin test.

Cattle brought into the Commonwealth under this clause (c) shall be held in quarantine at destination, or at such place as may be designated by an official or agent of the said department until after the cattle shall have passed an approved tuberculin retest within a period of 60 to 90 days after their entry into the Commonwealth. The maintenance of the cattle during the period of quarantine and the tuberculin retesting shall be at the owner's expense.

(d) Apparently healthy bulls, steers, cows, heifers, and calves for stocker or feeder purposes, not eligible to be brought into the Commonwealth under clause (a) or (b) of this section, are not required to be tuberculin tested if kept separate from tuberculin-tested cattle at destination; otherwise such stocker and feeder cattle must be accompanied by a health certificate and tuberculin-test chart approved by the proper livestock sanitary official of the State from which the cattle are brought showing that the said stocker or feeder cattle were tuberculin tested and passed immediately prior to entry. An approved copy of the certificate and tuberculin-test chart shall be forwarded so as to reach the office of the department of agriculture, Harrisburg, before arrival of cattle at destination, except that stocker or feeder cattle consigned to or billed through the public stockyards at Pittsburgh or Lancaster are not required to be tuberculin tested before entry into the Commonwealth. Said cattle will be examined and tuberculin tested at the yards without a charge for testing. All cattle brought into the Commonwealth for stocker or feeder purposes under this clause (d), not having been tuberculin tested, may be disposed of by the owner in this Commonwealth only for immediate slaughter or under supervision of the department of agriculture. Stockyards companies shall provide cleaned and disinfected quarters for cattle while undergoing the examination and test.

(e) Apparently healthy cattle of strictly slaughter types and to be used only for immediate slaughter may be brought into the Commonwealth without examination and tuberculin test only when said immediate

slaughter cattle are consigned to the public stockyards at Pittsburgh or Lancaster or to a slaughtering establishment or slaughtering center approved and designated by the United States Department of Agriculture and the Pennsylvania Department of Agriculture. Cattle brought into the Commonwealth under this clause (e) must be slaughtered within 10 days after arrival at destination, except when the 10-day period is extended by a special permit from an official or agent of the Pennsylvania Department of Agriculture.

Any class of cattle brought into the Commonwealth temporarily for exhibition or to be bred shall be accompanied by a health certificate and tuberculin-test chart approved by the proper livestock sanitary official of the State from which the cattle are brought. An approved copy of the certificate and chart must be forwarded so as to reach the office of the department of agriculture at Harrisburg before arrival of cattle at destination.

Cattle, including calves (except as herein provided), shall not be brought into Pennsylvania except in accordance with the following regulations:

Cattle that have aborted, or that have been treated with a live culture of *Brucella abortus*, or that failed to pass a negative blood test, shall be deemed as infected with Bang's disease, and no cattle so infected shall be brought into Pennsylvania except upon written permit from the director of the Pennsylvania Bureau of Animal Industry and subject to quarantine upon entry.

Cattle, including calves (except as herein provided), to be brought into Pennsylvania must have come directly from herds that are certified by the proper livestock sanitary official as being free from Bang's disease, or must have passed a satisfactory test for Bang's disease and found negative within 30 days of entry. Such cattle must be accompanied by a health certificate approved by the proper livestock sanitary official of the State in which the Bang's disease test was made, and a copy of the certificate shall be forwarded to the director of the Pennsylvania Bureau of Animal Industry, Harrisburg, Pa., so as to reach Harrisburg before arrival of the cattle at destination. The health certificate shall contain a complete statement of the actual results of the test, description, and tag number, or registry name and number, for identification of each animal tested, names and addresses

of the owner, consignor, and consignee, date on which blood was tested.

Cattle coming into Pennsylvania under this quarantine regulation must also comply with Federal and State tuberculin-test regulations.

Cattle, including calves, for immediate slaughter consigned to approved slaughterhouses or to the official stockyards at Pittsburgh or Lancaster and cattle of distinctive beef type that are to be used for feeders or stockers are exempt from this Bang's disease regulation, but must comply with the requirements for tuberculin testing.

Swine.—Swine that are affected with or that have been recently and dangerously exposed to hog cholera or other dangerous, transmissible disease shall not be brought into Pennsylvania for any purpose. Swine for purposes other than immediate slaughter shall not be brought into Pennsylvania until after they shall have been vaccinated against hog cholera by the single or double method of vaccination. Vaccinated swine shall be securely ear tagged with a numbered tag to be furnished by the veterinarian or consignor. A certificate of health and vaccination by the veterinarian and stating the ear-tag numbers, date of vaccination, amount of serum or serum and virus used, shall be furnished for all swine and a copy of the certificate shall be forwarded immediately by the consignor to official (below) and a copy of the certificate shall accompany the swine while en route to destination, except: Purebred swine brought into the State for breeding or exhibition purposes need not be ear tagged, but must be accompanied by a copy of the certificate. Swine given the single treatment shall be vaccinated within 30 days prior to entry. Swine given the double treatment are not limited as to time, but shall not be sold in Pennsylvania unless the seller shall give the buyer notice that the swine have been double treated by the serum and virus method. And apparently healthy swine that have not been dangerously exposed to any transmissible disease may be brought into Pennsylvania for immediate slaughter only, without certificate of health, provided they are consigned directly to an approved slaughterer or slaughtering center.

Sheep and goats.—Sheep and goats affected with anthrax, apthous fever, blackleg, hemorrhagic septicemia, sheep pox, foot rot, lip-and-leg ulceration, scabies, or any other dangerous transmissible disease

shall not be brought into Pennsylvania for any purpose. Sheep and goats apparently healthy may be brought into the State for immediate slaughter only when consigned directly to the public stockyards at Pittsburgh or Lancaster or to an approved slaughtering establishment or slaughtering center "For immediate slaughter," and the animals must be slaughtered within 10 days after arrival. Sheep and goats, for purposes other than immediate slaughter, that have been handled through or in stockyards, railroad feeding, watering, or resting stations, or premises in public use for livestock, shall not be brought into Pennsylvania until after they shall have been dipped in accordance with the regulations of the United States Department of Agriculture and must be accompanied while in transit with a certificate of such dipping. Sheep and goats that are apparently healthy and have not been exposed to a dangerous transmissible disease and have not been handled through stockyards, etc., may be brought into Pennsylvania for purposes other than immediate slaughter if accompanied by a statement from the owner or importer certifying that the animals have not been exposed and that he believes them to be free from any dangerous transmissible disease. If transported by common carrier, the animals must be conveyed in cars, vehicles, conveyances, or spaces that have been cleaned and disinfected after the use thereof for previous livestock shipments. On arrival at destination they shall be unloaded directly from the car or other conveyance into cleaned and disinfected vehicles or on clean and uninfected ground. Purebred sheep and goats for breeding or exhibition purposes that are apparently healthy and unexposed may be brought into Pennsylvania without permit or official inspection if they are accompanied by a statement from the owner or importer that the animals have not been dangerously exposed to transmissible diseases and that he believes them to be free from disease. A copy of the certificate shall be forwarded promptly to official (below).

Poultry.—Poultry that are affected with or that have been dangerously exposed to any dangerous, transmissible disease shall not be brought into Pennsylvania for any purpose whatever. Apparently healthy poultry may be brought in for any purpose without inspection or certificate of health.

Wild animals.—Wild and semiwild animals under domestication or in custody may be brought into Pennsylvania at any time except when a special order shall have been issued prohibiting the bringing into the State of any such animals.

Who may inspect.—Only veterinarians who are accredited by State and Federal regulatory authorities.

Official.—Bureau of animal industry, Harrisburg.

PUERTO RICO

Horses, mules, and asses.—Every horse that lands in Puerto Rico shall have been submitted, prior to leaving the port of shipment, to an ophthalmic mallein test and must be accompanied by documents showing that it has been submitted to such test. Thirty days after landing it shall be submitted by the officers of the department to a like test.

Cattle.—All cattle landing in Puerto Rico shall have been submitted, prior to leaving the port of shipment, to a tuberculin test and shall be accompanied by documents showing that they have been submitted to such test. Ninety days after landing the department shall direct one of its officers to submit such animals to a second test.

Every animal landed in Puerto Rico giving a positive reaction to the tests stipulated for horses and cattle shall be killed and buried under such conditions as the department may determine.

Who may inspect.—Only veterinary inspectors of the department of health of Puerto Rico (except as below).

Animals imported from foreign countries are inspected by a veterinarian of the Bureau of Animal Industry of the United States Department of Agriculture.

Official.—Commissioner of health of Puerto Rico, San Juan.

RHODE ISLAND

Horses, mules, and asses.—Ophthalmic mallein test either before or after arrival. A permit must be obtained from the chief veterinarian of the State department of agriculture, and must accompany the shipment.

Cattle.—Cattle may be brought into Rhode Island only after a permit has been issued for such movement of cattle by the chief veterinarian of the State de-

partment of agriculture, such permits being issued only when charts are presented showing that the animals to be imported have been subjected to the intradermic test and have shown a negative reaction within three months from date of importation. All other requirements in accordance with the Federal regulations.

Swine.—Health certificate unless for immediate slaughter.

Sheep.—Health certificate.

Dogs.—Health certificate.

Who may inspect.—Chief veterinarian of the State department of agriculture, approved veterinarians, and cattle commissioners appointed by said chief veterinarian.

Official.—Chief veterinarian, State House, Providence.

SOUTH CAROLINA

Horses, mules, and asses.—Health certificate, mal-
lein test of any exposed animals.

Cattle.—Health certificate and tuberculin-test chart of all cattle for breeding or dairy purposes within 30 days of shipment, unless they are from accredited herd or herds in process of accreditation.

Infectious-abortion test of all cattle more than 6 months of age if for breeding or dairy purposes, within 21 days of shipment.

Cattle for slaughter, if consigned to points designated by State veterinarian as immediate-slaughter points, will be accepted on shipper's affidavit stating that cattle are to be used for immediate-slaughter purposes only.

Swine.—Health certificate showing treatment against hog cholera within 18 days if by serum-alone method, or not less than 18 days if by serum-and-virus method, before shipment.

Infectious-abortion test of all swine more than 6 months of age if for breeding purposes, within 21 days of shipment.

Swine for slaughter, if consigned to points designated by State veterinarian as immediate-slaughter points, will be accepted on shipper's affidavit stating that swine are to be used for immediate-slaughter purposes only.

Sheep.—Health certificate unless consigned to designated immediate-slaughter points.

Poultry.—If over 4 months of age and for purposes other than immediate slaughter, shall pass the standard intradermic tuberculin test within 30 days of shipment.

Who may inspect.—Official veterinarian, State or Federal.

Official.—State veterinarian, Columbia.

SOUTH DAKOTA

Horses, mules, and asses.—Horses, mules, and asses must be accompanied by a health certificate indorsed by the proper livestock sanitary officials of the State of origin. A copy of such certificate shall be immediately forwarded to the South Dakota Division of Animal Industry, Pierre, S. Dak.

Stallions and jacks must be accompanied by a special certificate of soundness from an approved veterinarian on form furnished by this department, certifying that each animal is free from cataract, amaurosis, laryngeal hemiplegia (roaring or whistling), stringhalt, glanders, sidebone, farcy, clinical symptoms of *maladie du coït*, urethral gleet, mange, bone spavin, ringbone, and curb when accompanied by curby hock. A copy of this certificate must be mailed to the director of the division of animal industry at least five days before the importation of each such animal into the State.

Cattle.—Bulls and female cattle brought into the State must be accompanied by an official health certificate, including a chart showing that they have passed a satisfactory tuberculin test. If satisfactory evidence is furnished that bulls, cows, or heifers are strictly range cattle originating in any one of the States of Arizona, New Mexico, Texas, Utah, Colorado, Idaho, Montana, Wyoming, or Nevada, or in Kansas or Nebraska west of the one hundredth meridian, or other territory practically free from tuberculosis, and will not be used for dairy or domestic purposes, a permit may be issued on request of the owner by the South Dakota Division of Animal Industry admitting such cattle without tuberculin test.

Cattle from Federal-State accredited tuberculosis-free herds or from areas officially declared by the chief of the United States Bureau of Animal Industry as modified accredited areas must be accompanied by an official certificate signed by Federal or State authorities of the State of origin showing them to be

from such herds or from unquarantined herds in modified accredited areas.

All tuberculin tests must be made within 30 days prior to date of shipment.

All certificates must show the number of cattle, name of owner, and post-office address. All cattle not identified by registration name and number shall be identified by a proper metal tag, bearing a serial number, attached to the ear.

No breeding or dairy cattle that have given a positive or suspicious reaction to any blood test for Bang abortion disease, or are known to be infected, shall be admitted into the State of South Dakota.

Steers shipped into the State or transported from public stockyards within the State must be accompanied by an official health certificate: *Provided, however,* That when the steers are consigned to counties that are officially designated as modified accredited areas, or are in the process of accreditation, a permit must be obtained from the division of animal industry, Pierre, permitting the shipment in quarantine at destination.

Swine.—All swine imported into South Dakota, except for immediate slaughter, must be transported in crates or cleaned and disinfected cars and must be accompanied by a certificate that the swine have been immunized against hog cholera with serum and virus not less than 21 days prior to date of shipment, or with the serum-alone treatment not more than 21 days before date of arrival of shipment at destination. Such certificates must state the date of immunization and the name of the company manufacturing the serum used. Swine from public stockyards must be immunized in accordance with Federal regulations and shipped into quarantine for a period of 21 days.

Sheep.—The owner of any sheep to be imported into South Dakota by any means or method must first obtain a permit to do so from the director of the division of animal industry. All such sheep must then be inspected by an inspector of the United States Bureau of Animal Industry or an approved veterinarian where such sheep originate and be accompanied by a certificate issued by the inspecting officer showing them to be free from infectious and contagious diseases, giving points of origin and destination and stating for what purpose the sheep are to be used. On arrival in South Dakota such sheep shall be placed in quarantine and be immediately dipped at the expense of

the owner under supervision of a representative of the division of animal industry of the State department of agriculture or of the United States Bureau of Animal Industry in a manner approved by that bureau for the eradication of scabies.

Sheep for breeding purposes only may be brought into the State on a permit and quarantined without dipping.

Sheep for exhibition only and immediate removal thereafter may be brought into South Dakota with health certificate. No restrictions are placed on sheep imported for immediate slaughter.

All expenses for the inspecting, testing, quarantining, and dipping of livestock brought into the State shall be paid by the owner of such livestock.

No agent or employee of a railroad or other transportation company shall deliver or release from the charge or custody of such company within the State, except for immediate slaughter under official supervision, any livestock brought into the State unless he has in his possession a satisfactory health certificate covering the livestock in such shipment.

Who may inspect.—Veterinarians authorized by the State of origin and approved by the United States Bureau of Animal Industry to apply the tuberculin test or by a regular bureau inspector.

Official.—Director, division of animal industry, Pierre.

TENNESSEE

Horses, mules, and asses.—Health certificate.

Cattle.—Bulls and female cattle must be accompanied by an approved health certificate, including tuberculin test applied not more than 60 days before shipment. Cattle from Federal-State accredited herds or modified accredited areas admitted without the tuberculin test. All cattle entering the State subject to retest within 90 days at the discretion of the State veterinarian at owner's expense, with no indemnity for reactors.

Cattle for immediate slaughter may be shipped without restrictions to public stockyards or recognized slaughtering centers, where Federal inspection is maintained.

Steers for feeding and grazing purposes may enter the State without the tuberculin test provided they are accompanied by an approved health certificate or written permit obtained from the State veterinarian.

Such steers must be held in quarantine and shall not be permitted to mingle with other cattle unless they have passed a satisfactory tuberculin test.

Sheep.—Sheep intended for purposes other than immediate slaughter must be accompanied by a certificate of health indicating that they are free from disease and have been subjected to an official dipping for scabies in a solution approved by the United States Bureau of Animal Industry within 10 days immediately preceding date of shipment, and must be loaded in cleaned and disinfected cars. The dipping requirements do not apply to sheep for exhibition purposes or purebred sheep shipped in crates.

Swine.—For purposes other than immediate slaughter must be accompanied by an official health certificate or affidavit from owner certifying that they have been inoculated with a standard dose of anti-hog-cholera serum only not more than 10 days before shipment, or a standard dose of anti-hog-cholera serum and hog-cholera virus at least 21 days before shipment into Tennessee.

Who may inspect.—State and Federal inspectors or other qualified veterinarians, who are approved by the livestock sanitary control official of the State in which the shipment originates.

Official.—State veterinarian, State capitol, Nashville.

TEXAS

Horses, mules, and asses.—Official health certificate. No mallein test required.

Cattle.—Cattle for dairy or breeding purposes must be accompanied by health certificates showing tuberculin test within 60 days of date of entry, except that cattle from accredited herds and modified accredited areas may enter the State without tuberculin test, when certified to by a State or Federal veterinarian as being accredited or from a modified accredited area. Cattle other than from an accredited herd or modified accredited area will be quarantined for a retest within 90 days from the date of last test. The intradermic test is accepted with a 72-hour reading.

All dairy or breeding cattle, including calves 6 months or more old, except from "officially certified Bang abortion-free accredited herds," must pass an agglutination blood test approved by the livestock sanitary authorities of State of origin, such test to

have been conducted within 21 days prior to date of shipment and not within 15 days after the animals have calved.

Cattle from Federal or State fever-tick-quarantined areas must be certified to as being free from fever ticks by an inspector of the United States Bureau of Animal Industry, copy of certificate attached to way-bill accompanying shipment and copy mailed to the Texas Livestock Sanitary Commission.

Cattle from areas quarantined on account of cattle scabies must be accompanied by a certificate issued by an authorized inspector of the United States Bureau of Animal Industry or the livestock sanitary board of the State of origin showing that the cattle have been inspected and dipped for scab infection.

Swine.—Hogs for purposes other than immediate slaughter must be accompanied by a health certificate showing immunization with serum alone within 30 days of date of entry, or by simultaneous method at least 30 days before date of entry, and all such hogs must have been dipped in a 2 per cent solution of any saponified cresol disinfectant permitted by the United States Bureau of Animal Industry. Such hogs must be shipped in clean and disinfected cars and not handled through public stockyards or chutes at point of origin, en route, or at destination.

Hogs for immediate slaughter must be consigned to recognized federally inspected slaughtering establishments. Cars or boats containing hogs from areas known to be infected with hog cholera must be placarded "CHOLERA-EXPOSED HOGS."

Goats.—Must be accompanied by a health certificate from an authorized veterinarian.

Sheep.—(a) The importer must apply to and receive from the livestock sanitary commission of this State permission to import any sheep (except sheep billed to market centers for slaughter purposes) into the State.

(b) Such importations shall be accompanied by a certificate of a regularly employed and duly authorized sheep-scabies inspector of the State of origin, or a duly appointed and acting sheep-scabies inspector of the United States Bureau of Animal Industry, certifying that said sheep are free from scabies infection and exposure thereto, and that said sheep have been dipped in a dipping fluid recognized by the United States Bureau of Animal Industry for the

eradication of sheep scabies and in a manner calculated to have eradicated infection or exposure, as the case may be, within 10 days next preceding the date of such importation: *Provided, however*, That sheep dipped for infection at point of origin shall be held under quarantine at point of destination for a period of 180 days. By "point of destination" as used herein is meant the range on which the said sheep are placed in this State: *Provided further*, That in the event the sheep are accompanied by the proper certification and permit they may be moved into the State without first having been dipped, when arrangements are made with the livestock sanitary commission at Fort Worth, Tex., prior to movement, to dip on arrival in the State.

(c) All importations of sheep by rail shall be billed to a recognized sheep-dipping center where the livestock sanitary commission of this State maintains an inspector to supervise the dipping of sheep, except sheep imported for show purposes only or for immediate slaughter, and on arrival there shall be dipped unless the same are accompanied by a certificate of dipping at point of origin as provided in paragraph (b) of these requirements.

(d) The importer of show sheep shall be given a reasonable length of time to display his sheep at county fairs or livestock exhibits, but in no instance shall this time be extended for a longer period than 60 days from date of importation and all such sheep shall be kept separate from all other than show sheep, and shall be dipped at least once before being distributed to the range.

No common carrier by rail in this State shall receive from any shipper or connecting carrier into this State any shipment of sheep (except sheep billed for slaughter purposes) unless the bill of lading covering said shipment is accompanied by a written permit from the livestock sanitary commission of this State, or its chairman, permitting such sheep to be imported into this State.

Dogs.—Official health certificates showing freedom from disease and to have been immunized against rabies with a recognized rabies vaccine not longer than 10 months prior to shipment.

Poultry.—Poultry may be admitted into the State subject only to such regulations as may be enforced by the United States Bureau of Animal Industry, ex-

cept that chickens 4 months of age or over must pass the standard intradermic tuberculin test within 30 days preceding the date of entrance into the State.

Who may inspect.—Federal or State veterinarians or accredited or approved veterinarians, approved by the United States Bureau of Animal Industry, and officials of the State of origin, or authorized sheep-scab inspectors of the State of origin, or inspectors of the United States Bureau of Animal Industry.

Officials.—Chairman, Livestock Sanitary Commission of Texas; and State veterinarian, Fort Worth.

UTAH

Horses, mules, and asses.—Health certificate, including mallein-test chart made within 30 days prior to arrival of animals at destination. Ophthalmic mallein test recognized.

Animals for temporary racing or exhibition purposes admitted on clinical health certificate accompanied by affidavit from owner stating that they are for temporary racing or exhibition purposes only.

Cattle.—All cattle for dairy or breeding purposes, health certificate, including (official) subcutaneous or intradermic tuberculin-test chart.

Cattle accepted from officially accredited tuberculosis-free herds when accompanied by proper certificate signed by State and Federal authorities.

Branded range bulls, health certificate, including intradermic test chart, provided the last observation is not made earlier than the seventy-second hour, and all cattle brought into this State for dairy or breeding purposes shall be kept and held entirely separate from any and all other cattle for a period of 90 days from date of arrival at destination unless sooner released by the State veterinarian, provided that mature cows may be kept on owner's inclosed premises for a like period of time. The State board of agriculture shall be notified by the owner or consignee of the date of arrival of such imported cattle and the place where held. The State veterinarian shall cause such cattle to be turberculin tested within the period named above, employing not less than two recognized tests, the owner of said cattle to pay the cost of the testing, and no indemnity shall be paid by the State: *Provided*, That these provisions shall not apply to what is known as range cattle or branded cattle raised in pasture or open range or to cattle imported for exhibition pur-

poses or resale on commission: *Provided further*, That such exception shall not apply for a longer time than the exhibition period or in case of resale on commission for a longer period than 10 days: *Provided further*, That the State board of agriculture shall be notified of the arrival by the importer.

For branded range cattle, health certificate showing them to be free from any contagious or infectious disease.

All dairy and breeding cattle imported into Utah, except cattle consigned to public stockyards at North Salt Lake and Ogden, where Federal inspection is maintained, shall have passed a satisfactory negative agglutination blood test for Bang's abortion disease within 30 days before date of importation, except cattle originating from herds officially designated and certified as free from this disease.

Tests will not be accepted if conducted within 21 days after the animals have calved. The blood test must have been applied by veterinarians or laboratories approved by the sanitary officials of the State of origin. An official certificate approved by the sanitary authorities of the State of origin and giving the date of the test shall accompany the cattle and a copy of such certificate shall be immediately forwarded to the State veterinarian at Salt Lake City.

All dairy and breeding cattle over 6 months of age offered for exhibition purposes shall have complied with the provisions of this regulation.

Cattle which have given positive or suspicious reactions to the agglutination blood test for Bang's disease may be imported into the State upon a special written permit issued by the State veterinarian, to be issued only upon receipt of a written agreement by the owner that such cattle shall remain in his possession and be kept separate and apart from all cattle except those that have given positive reaction to the agglutination blood test.

Swine.—For purposes other than immediate slaughter must be accompanied by a certificate certifying that the swine (1) are free from any contagious or communicable disease, (2) have been immunized against hog cholera 30 days before shipment, (3) and have been dipped in a 3 per cent solution of cresol compound, U. S. P. Immunization shall be active (serum-simultaneous) with hog-cholera virus and anti-hog-cholera serum that meets the potency, purity, and permanency requirements of the Federal Govern-

ment; serum and virus must be administered by a veterinarian. The certificate shall be indorsed by the State veterinarian of State or Territory of origin.

All public stockyards and all railroad livestock and express cars and express barns or pens shall be considered infected territory.

Who may inspect.—Federal, State, or deputy State veterinarian of the State in which the shipment originated.

Official.—State veterinarian, Salt Lake City.

Sheep and goats.—Other than immediate slaughter, health certificate certifying them to be free from disease; duplicate must be sent to the chief sheep inspector.

If the sheep or goats come from a known infected district, they must be accompanied by a certificate of dipping under the supervision of a State or Federal inspector. If not accompanied by a certificate of dipping, they must be dipped once if exposed and twice if infected with scabies, with an interval of from 10 to 14 days between dippings, by either State or Federal inspector.

Who may inspect.—Authorized State inspectors and inspectors of the United States Bureau of Animal Industry.

Official.—Chief sheep inspector, State board of agriculture, Salt Lake City.

VERMONT

Horses, mules, and asses.—Before shipping, permit must be obtained from the commissioner of agriculture. Physical examination or mallein test required. Permits will state whether mallein test or physical examination only is required. Animals must remain in quarantine on owner's or consignee's premises until released by commissioner of agriculture. Such release will be sent when satisfactory health certificates are received. Physical examination or mallein test must be made within 15 days of the date of entry. If made in State of origin, certificate must be approved by official in charge of livestock sanitary matters in State of origin. Test or examination after arrival must be made by veterinarian, approved by commissioner of agriculture, at owner's expense.

Cattle.—Before shipping, permit must be obtained from the commissioner of agriculture. Requests for permits must state number of cattle, ages of all calves

under 6 months, and whether cattle are for dairy, exhibition, or breeding purposes or for immediate re-shipment, or immediate slaughter. All cattle from other than officially accredited herds, or herds under State and Federal supervision which have passed one clean test, except those for exhibition, immediate re-shipment, or immediate slaughter, shall be held in quarantine for an official tuberculin test to be made by an approved veterinarian under the direction of the commissioner of agriculture, at the owner's expense, not less than 60 days after entry. Animals passing the test will be released from quarantine upon receipt of satisfactory test report. Reactors may be killed on importer's premises under supervision of a veterinarian, may be shipped to an abattoir for slaughter under Federal inspection, or may be returned to State of origin if shipped in accordance with Federal regulations.

Cattle from officially accredited herds, or herds under State and Federal supervision which have passed one clean test, will not be detained in quarantine if the commissioner of agriculture is furnished with a certificate by the proper official showing that cattle are from such herds.

Sheep.—No restrictions.

Swine.—All swine shipped, transported, or otherwise moved into the State, except swine shipped for immediate slaughter to a recognized slaughtering center, must be accompanied by a health certificate signed by a veterinarian whose competency and reliability are attested by the authorities charged with the control of disease of domestic animals in the State of origin, stating that said animals are free from infectious and communicable diseases and that each animal has been treated with a proper dose of approved anti-hog-cholera serum within 30 days of date of entry into Vermont.

Swine that have received the serum-virus treatment must not be brought into Vermont, except for immediate slaughter, until a period of 30 days has elapsed since date of treatment.

All swine shall be shipped in crates or cars thoroughly disinfected with an approved disinfectant.

Copy of certificate referred to above shall be immediately forwarded to the commissioner of agriculture, Montpelier.

Who may inspect.—Federal inspectors, veterinarians whose inspections are indorsed by proper sanitary offi-

cials of State of origin, and the livestock commissioner or his assistant.

Official.—Livestock commissioner, State House, Montpelier.

VIRGINIA

Horses, mules, and asses.—No restrictions.

Cattle.—Cattle which may be used for dairy or breeding purposes must be accompanied by an approved certificate of health and tuberculin test, the certificate to have been received by the State veterinarian not later than the arrival of the cattle. Tuberculin test shall have been applied within 60 days immediately preceding the shipment, except for cattle from accredited herds, accredited areas, or herds under State or Federal supervision.

Tuberculin tests may be applied by the intradermic, subcutaneous, or combination method. Health certificates improperly executed, illegible, or unofficial will not be accepted.

Cattle shall be identified in case of purebred or registered animals by recording the name and registration number of each animal, or in case of grade or unregistered animals shall be effectively tagged in the right ear with a metal tag bearing a serial number with the name or the initial of the State of origin.

Cattle for immediate slaughter must be consigned to public stockyards or points where Federal meat inspection is maintained, or to other points designated by the State veterinarian, and permission must be obtained in writing or by telegram from him before shipments of cattle for immediate slaughter are made to points other than public stockyards or points where Federal meat inspection is maintained.

No cattle 6 months of age or over which may be used for dairy or breeding purposes may be brought into the State unless free from Bang's abortion disease, as shown by a certificate showing the result of the "tube test" made by a laboratory or veterinarian recognized as competent by the proper authorities of the State of origin, such test to be made not more than 30 days before the date of shipment, said certificate to show the results of the test in detail and to be made in duplicate, one copy to be attached to the bill of lading and to be a part of it and one to be sent to the State veterinarian, said certificate not to be valid unless and until countersigned by the proper authority of the State of origin, or unless the cattle

are from abortion-free accredited herds in other States properly certified to by the regulatory authorities of the State of origin and recognized by the Virginia State Board of Agriculture.

Cattle from tick-infested territory shall not be shipped into the State except in accordance with the regulations of the United States Bureau of Animal Industry.

Swine.—Hogs shipped into this State for breeding or feeding purposes shall be free from disease and shall be immunized against hog cholera by the simultaneous method by an approved veterinarian in the State of origin, not less than 21 days before they are shipped, or by the serum-alone method within 10 days of the date of shipment, and shall be shipped in cleaned and disinfected cars, vehicles, or crates. Health certificates signed by an approved veterinarian in the State of origin shall accompany each shipment and a copy of the certificate shall be mailed to the State veterinarian at time shipment is made.

Sheep.—All sheep shipped, driven, trailed, or otherwise brought into the State for any purpose other than immediate slaughter must be accompanied by a certificate of health indicating that they are free from disease and have been subjected to an official dipping for scabies, in a solution approved by the United States Bureau of Animal Industry, within 10 days immediately preceding date of shipment, and must be loaded in clean and disinfected cars or vehicles. The dipping requirements shall not apply to purebred sheep. Supervising inspector shall furnish dipping certificates, giving names and strength of dip. Sheep from areas quarantined on account of scabies shall receive two dippings not less than 10 days nor more than 15 days apart and loaded in cleaned and disinfected cars.

Sheep not accompanied by a certificate of health may be shipped to points within Virginia if billed to or through public stockyards where Federal inspection is maintained.

No sheep showing symptoms of lip-and-leg ulceration (necrobacillosis) or foot rot in any of its forms shall be shipped or otherwise moved into the State.

Poultry.—All chickens. 4 months of age and over, before entering the State for purposes other than immediate slaughter shall pass the standard intradermic tuberculin test within 30 days of the date of movement into the State.

Each chicken shall be identified by a sealed numbered leg band and the health certificate must show the number on the band and the date of testing. The health certificate must be issued in duplicate, the duplicate to accompany shipment to destination and the original forwarded to the State veterinarian.

All tuberculin tests must be conducted by a graduate veterinarian approved by the proper livestock sanitary officials of the State of origin.

This regulation shall not apply to chickens originating in tuberculosis-free accredited flocks.

Who may inspect.—Inspectors of the United States Bureau of Animal Industry, State veterinarians, and accredited veterinarians who are approved by the State veterinarian or livestock sanitary official of the State in which the animals originate.

Official.—State veterinarian, Richmond.

WASHINGTON

Horses, mules, and asses.—Horses, mules, and asses shall have been subjected to the mallein test not more than 20 days prior to shipment, and must be accompanied by an official health certificate, including the record of such test, and certifying that the animals listed thereon are free from glanders and other infectious and communicable diseases.

Horses, mules, and asses for temporary racing or exhibition purposes may be shipped or otherwise transported into this State on a clinical health certificate for a period not to exceed 90 days. An affidavit from the owner or agent must accompany the health certificate, showing that the animals covered by the health certificate are for racing or exhibition purposes only.

Cattle.—All range cows and all bulls shipped, transported, or otherwise moved into the State of Washington must be accompanied by an official health certificate and tuberculin-test record showing that each and every animal is free from tuberculosis and other infectious and communicable diseases. The tuberculin test shall have been made within 60 days prior to date of shipment: *Provided, however,* That the cattle may be shipped direct to an official public stockyard where Federal inspection is maintained without such certificate, but shall not be moved therefrom until they have been tested and examined as hereinabove provided for and a certificate issued accordingly.

NOTE.—An official public stockyard is hereby defined as one where inspection is maintained at all times by the United States Bureau of Animal Industry. The Spokane Union Stock Yards are the only official public stockyards in the State of Washington in accordance with these regulations.

Cattle from a herd officially accredited by the State of origin and the United States Bureau of Animal Industry cooperating may be shipped on a clinical health certificate issued by a State or Federal veterinarian. Such certificate shall show the number of accredited-herd certificate, date of expiration, and description of cattle in accordance with the Federal regulations governing the interstate movement of livestock.

Cattle from herds from modified accredited areas, as recognized by Federal authorities and State of origin, may be shipped on clinical health certificates issued by a State or Federal veterinarian. Such certificate shall show the number of the modified accredited-area certificate, date of expiration, and description of cattle, in accordance with the rules and regulations of the United States Bureau of Animal Industry relating to modified accredited areas.

Steers, spayed females, and strictly range females not showing any crosses with the dairy type may be shipped into the State on a clinical health certificate certifying that they are clinically free from infectious and communicable diseases, provided a permit in writing, with serial number, is obtained from the Department of Agriculture of the State of Washington, division of dairy and livestock, Olympia. Application for the permit must give legal description of premises, farm, pasture land, or location of feeding parts, and no cattle imported into the State will be permitted to feed or graze on the open ranges and public domain unless they are free from symptoms of contagious and infectious diseases and have given a negative test for tuberculosis by either the intradermic or subcutaneous method. The cattle, if not tested and to be fed or grazed on permit as described above, must be branded with the letter "F" on the right jaw with a brand 2½ inches wide by 3 inches high: *Provided*, That steers, spayed females, and strictly range females may be shipped to an official public stockyard without a certificate of inspection, but before being moved therefrom must be examined and branded as described above by the supervising Bureau of Animal Industry

inspector, and the forms as issued by the United States Bureau of Animal Industry must give the number of the permit and be submitted to the State official in charge of the dairy and livestock division.

Cattle may be imported into the State for immediate slaughter (to be slaughtered not later than 14 days after arrival at destination) without test or examination: *Provided*, That (a) the waybills are marked "Cattle for immediate slaughter" and this fact certified to by the owner; (b) that said cattle will not be diverted en route; (c) that said cattle are billed to a recognized slaughtering center as listed in this order.

The intradermic and subcutaneous methods of testing will be accepted for shipments of cattle into the State: *Provided*, That with the intradermic test the first observation shall not be made before the seventy-second hour, nor later than the seventy-sixth hour from the time of injection, and a second observation be made at the ninety-sixth hour; and if any reactors or suspects are found among the cattle, a third observation must be made at the one hundred and twentieth hour before the shipment is made.

Swine.—Swine for all purposes other than immediate slaughter must be accompanied by a clinical health certificate stating (a) that they are free from all infectious and communicable diseases, (b) that they have not come from a public stockyard or slaughterhouse yard, (c) that they have either originated in a district in which hog cholera has not existed during the past six months, or if from an infected district, that they have either been single treated not less than 18 nor more than 30 days prior to date of shipment, and if double treated, it must have been 90 days prior to date of shipment.

Swine for immediate slaughter will be admitted without inspection when billed to a recognized slaughtering center (see list) or public stockyards under Federal supervision: *Provided*, (a) That the waybills are marked "Swine for immediate slaughter," and (b) that they will not be diverted en route.

Swine shall not be shipped or otherwise moved into or within the State from a public yard or slaughterhouse yard unless they have either been single or double treated and thereafter dipped in a solution of cresol compound U. S. P. of 2 per cent strength or a solution of another recognized disinfectant.

All swine shipped or otherwise transported into or within the State must be loaded through clean and disinfected yards and chutes and into cars, wagons, trucks, or other conveyances cleaned and disinfected for the shipment.

All swine receiving the double treatment will be held in quarantine at point of destination for a period of three weeks.

Purebred swine for exhibition or breeding purposes may be shipped into the State in cars by express when accompanied by a permit and affidavit issued in triplicate, blanks for which may be obtained from the department of agriculture, division of dairy and livestock, Olympia.

Sheep.—All sheep, except those for immediate slaughter, shipped, traileed, or otherwise transported into the State must be accompanied by a certificate of health certifying that they are free from symptoms of infectious and communicable diseases and that they have not been exposed to scabies for a period of six months or more preceding date of shipment. Each and every certificate issued must also include a certification from the owner that the sheep covered by the certificate have not been exposed to scabies for a period of six months or more preceding date of shipment.

All sheep shipped into or within the State must be loaded through clean and disinfected corrals and chutes and into cars cleaned and disinfected for the shipment or shipments. The veterinarian issuing the interstate health certificate shall certify thereon that he personally supervises or vouches for the disinfection of the cars as hereinabove provided for.

Purebred sheep for exhibition or breeding purposes may be shipped into the State in cars by express when accompanied by a permit and affidavit issued in triplicate, blanks for which may be obtained from the department of agriculture, division of dairy and livestock, Olympia.

Goats.—All goats shipped or otherwise moved into the State must be accompanied by an official health certificate certifying that they are free from infectious and communicable diseases.

Dogs.—All dogs shipped into the State for any purpose whatsoever, except performing dogs, must be accompanied by an official health certificate showing them to be free from symptoms of infectious and

communicable diseases and certifying that they have been vaccinated with rabies vaccine not over six months prior to date of shipment.

Who may test, examine, and issue health certificates.—State, Federal, or graduate licensed veterinarians authorized and approved by the State of origin and the United States Bureau of Animal Industry are hereby authorized to inspect and examine livestock and dogs for shipment into the State.

Recognized slaughtering centers.—Following is a list of recognized slaughtering centers, subject to change:

Armour & Co., Spokane.

Barton & Co., Seattle.

Carstens Packing Co., Spokane.

Carstens Packing Co., Tacoma.

Columbia Packing Co., Snohomish.

Enterprise Meat Co., Wenatchee.

Frye & Co., Seattle.

Gibson Packing Co., Yakima.

Hanses Packing Co., Yakima.

James Henry Packing Co., Seattle.

Inland Meat Co., Wenatchee.

Sumner Meat Co., Sumner.

Walla Walla Meat & Cold Storage Co., Walla Walla.

Official.—Director of agriculture, Olympia.

WEST VIRGINIA

Horses, mules, and asses.—Horses, mules, and asses must be certified as free from transmissible diseases as shown by physical examination within 30 days prior to entrance. Stallions and jacks must be subjected to a physical examination after arrival and license issued before being used for public service.

Cattle.—All cattle for breeding or dairy purposes, unless from Federal-State accredited herds or modified accredited areas, must be accompanied by a health certificate, including tuberculin-test chart covering test made within 60 days prior to entrance, and may be quarantined at destination for retest not less than 60 days nor more than 90 days after arrival, at the discretion of the commissioner of agriculture.

Cattle from Federal-State accredited tuberculosis-free herds must be accompanied by an official certificate signed by Federal or State authorities of the State of origin showing them to be from such herds

and including a copy of last previous tuberculin test of such animals.

Cattle from counties officially designated as modified accredited areas may enter the State without retest, provided they can be certified to by the livestock sanitary officials of the State of origin as having originated within such an area and are from herds in which no reactors were disclosed on the last official test.

Cattle more than 6 months of age intended for dairy or breeding purposes may enter the State only after having passed a negative test for Bang's abortion disease within 15 days prior to entry or are certified to as coming from herds recognized by the livestock sanitary authorities of the State of origin as free from that disease. Cattle subject to this regulation which are not properly certified to on the regular interstate health certificates will be quarantined for test at destination.

Steers for feeding and grazing purposes may enter the State without restriction except when destined to points in modified accredited counties or counties in which area tuberculosis-eradication work is in progress. In such counties steers shall be subject to quarantine at destination and shall not be permitted to mingle with tested cattle unless and until they have been subjected to a tuberculin test by an accredited veterinarian and record of test has been filed with the commissioner of agriculture.

Female cattle or bulls for feeding or grazing purposes entering the State must be accompanied by a certificate of tuberculin test applied within 60 days of entrance unless accompanied by a declaration of the consignee that said animals will be spayed or castrated within 15 days after arrival at destination, under which circumstances regulations covering importation of steers apply.

Cattle intended for slaughter within 10 days may be consigned to recognized slaughtering centers, provided declaration has been made by the shipper that the cattle are intended for such purpose, and during the time they are held before slaughter shall not mingle with cattle not intended for slaughter within a like period.

Swine.—Health certificate, stating freedom from hog cholera and other infectious diseases, based on a physical examination made by a qualified inspector.

Sheep.—Health certificate from a qualified veterinarian prior to shipment showing freedom from scabies or other infectious, contagious, or communicable diseases.

Who may inspect.—Inspectors of the United States Bureau of Animal Industry, State veterinarians, and accredited veterinarians whose certificates are approved by the livestock sanitary official of the State in which the animals originate.

Official.—Commissioner of agriculture, Charleston.

WISCONSIN

No animal of any class, which has been exposed to a highly contagious disease or comes from an area considered as exposed or closed on account of such highly contagious disease, shall be admitted.

All health certificates before being sent to the official named below must be approved by the proper sanitary officials of the State in which the shipment originates.

Horses, mules, and asses.—Health certificate, including mallein test within 60 days of shipment, except for race horses, performers, circus outfits traveling in their own railroad cars, and Army horses.

Cattle.—All cattle shipped into Wisconsin, except steers entering on permit and cattle from officially certified abortion-free herds, must have passed an official, completely negative test for Bang's disease within 30 days of shipment, the Bang's disease test not to be applied within 15 days after the animals have calved. Cattle from officially certified abortion-free herds must be accompanied by a record of the last test made within 12 months from date of shipment.

Cattle may be shipped into Wisconsin when coming from (a) accredited herds, (b) herds in which no reactors were disclosed by last official test applied, located in modified accredited areas, when certified to by the proper State livestock sanitary officials of the State in which the cattle originate.

Cattle under section (b) must be accompanied by a tuberculin-test chart containing a test applied within 12 months prior to date of shipment.

Other female cattle and bulls for dairy and breeding purposes may be admitted into this State provided they have been properly tuberculin tested by an accredited veterinarian within 60 days of shipment and certificates issued are indorsed by the proper State

officials. All cattle included in paragraph 2 must be held in quarantine, separate and apart from all other cattle, at destination, and retested by an accredited veterinarian not less than 60 days nor more than 90 days from date of entry into the State. All expense incident to quarantine and retesting must be borne by the owner of the cattle.

Female cattle and bulls of the beef breeds may be brought into the State for temporary feeding purposes provided they have been properly tuberculin tested by an authorized veterinarian within 30 days of entry, and such cattle must be held in quarantine separate and apart from all other cattle until released by the State department of agriculture.

Permits will be issued for the entry of steers into Wisconsin without their having been tuberculin tested after the proper affidavit has been filed with the State department of agriculture. Such affidavit forms shall be furnished on application to the State veterinarian, Madison. Such steers shall be maintained in quarantine, separate and apart from all other cattle, until shipped to a regularly established packing plant for slaughter, or permission obtained from the State department of agriculture for other disposition.

Bona fide slaughtering establishments may ship butcher stock from points without or within the State for immediate slaughter by making an application to the State veterinarian, who may issue a permit to ship such cattle without their having been previously tuberculin tested.

Slaughtering establishments maintaining Federal inspection may ship butcher cattle from points without or within the State for immediate slaughter without a permit.

Swine.—Swine shipped into the State from public stockyards for immediate slaughter must be consigned to a recognized slaughtering establishment and may not be diverted en route for any other purpose.

Swine shipped into the State from public stockyards, or otherwise, for feeding purposes must be inspected before shipment by a United States Bureau of Animal Industry inspector and may be treated by a competent veterinarian under bureau supervision and the shipment shall be accompanied by a certificate issued by a bureau inspector to the effect that they have been immunized. The swine shall be transported in clean and disinfected cars or other vehicles and must remain in quarantine at the owner's prem-

ises at the point of destination for a period of at least three weeks.

Swine for breeding purposes and not coming from public stockyards shall have a certificate of health certifying to one of the following: (a) None shall have been treated with the "double method" within 30 days of shipment. If immunized, state date of treatment. (b) If from district within 5 miles of hog-cholera outbreak, must either be immune or have had a treatment of serum alone not less than 10 days nor more than 30 days before shipment. (c) From non-infected districts, shipments may be made when accompanied by a certificate of health issued by an approved veterinarian. Original certificate must be mailed to the State veterinarian, Madison, and a copy attached to the bill of lading or placed in possession of such person who may transport the animals by any means other than by rail, boat, or express. (d) They must be crated and shipped by express or in clean and disinfected cars or other vehicles.

Sheep.—Sheep shipped into the State must have been dipped immediately before shipment in a dip approved by the State livestock sanitary board or the bureau of animal industry and under the supervision of State or Federal employees. Sheep intended for breeding purposes may, if crated and shipped by express, be brought into the State if accompanied by a certificate of health issued by an approved veterinarian, stating that such sheep are not affected with or been exposed to scabies. The original of such certificate must be mailed to the State veterinarian, Madison, and a copy accompany the shipment.

On application to the State veterinarian, Madison, a permit will be issued for the shipment of sheep for feeding purposes, without dipping, from scab-free territory, provided they are shipped in clean and disinfected cars and are unloaded en route only in premises or yards officially declared to be free from scab infection by the United States Bureau of Animal Industry.

Dogs.—Dogs may be brought into Wisconsin if accompanied by a certificate of health issued by an approved veterinarian, a copy of which must be mailed to the State veterinarian, Madison.

If a dog comes from a point within 50 miles of which rabies has been found within 90 days, the owner must agree in writing to keep it chained securely for 90 days and report to the State veterinarian's office,

Madison, every two weeks regarding the dog's condition.

Who may inspect.—Federal, State, assistant State veterinarian, or veterinarians whose integrity and competency are vouched for by the official in charge in the State of origin of shipment.

Official.—State veterinarian, Wisconsin department of agriculture, Madison.

WYOMING

Horses, mules, and asses.—May enter Wyoming when accompanied by an official health certificate. Stallions and jacks intended for breeding purposes must be accompanied by official health certificates, including mallein test and certificate of soundness. No certificate is necessary for horses entering State for temporary racing, circus, or speed purposes.

Cattle.—All bulls; purebred cattle intended for breeding purposes; farm-raised gentle female cattle; and all cattle intended for dairy purposes must be accompanied by a health certificate showing record of tuberculin test within 60 days before date of shipment, except that cattle from accredited herds and modified accredited areas may enter the State without tuberculin test when accompanied by certificate certified by a State or Federal veterinarian that said shipment originates from an accredited herd or modified accredited area. Strictly range cattle must be accompanied by a health certificate. Cattle for feeding purposes may enter Wyoming when accompanied by health certificate. Said feeder cattle to be subject to quarantine at Wyoming destination and to be held separate and apart from breeding and dairy cattle.

No cattle shall enter Wyoming which have shown positive or suspicious reaction to the agglutination test for infectious abortion unless special permit for the shipment of such cattle is granted by the State veterinarian.

Swine.—Swine for breeding or feeding purposes must be accompanied by a health certificate stating that the animals are free from infectious and contagious diseases and that they do not come from public stockyards or a district where hog cholera has existed during the past 3 months and that the animals have not been treated with serum and virus within 30 days prior to date of shipment, such shipments to be loaded into cleaned and disinfected cars.

Swine originating from public stockyards or districts where hog cholera has existed during the past 3 months may be shipped to Wyoming if treated with anti-hog-cholera serum within 15 days of date of shipment, or treated with serum and virus not less than 30 days before date of shipment. Said shipments are to be loaded into cleaned and disinfected cars.

Swine for immediate slaughter may enter the State when accompanied by letter or telegraphic permit issued by the State veterinarian. The hogs are to be slaughtered within seven days after arrival at destination.

Hog-cholera virus.—All persons, firms, and corporations are hereby prohibited from shipping any virulent blood or hog-cholera virus into the State unless written permission for each shipment is granted by the State veterinarian.

Dogs.—All dogs entering the State must be accompanied by a health certificate. The certificate must state that rabies has not existed within a distance of 50 miles of point of origin for the last 6 months.

Theatrical or performing dogs need not be accompanied by a health certificate.

Dogs for shipment originating in localities that can not comply with this regulation may enter Wyoming when accompanied by an official health certificate stating that they are free from infectious and contagious diseases and have been vaccinated with rabies vaccine not less than 30 days nor more than 6 months prior to date of shipment.

Who may inspect.—Federal inspectors under the direction of the United States Bureau of Animal Industry and all veterinarians approved by the livestock sanitary officials of the State of origin of the shipment.

When livestock destined for Wyoming are tested for infectious and contagious diseases one copy of all test charts must be attached to waybill and a copy must also be sent to the State veterinarian, Cheyenne, immediately on completion of the test.

Cattle, horses, or swine arriving in the State not tested or inspected in compliance with the governor's general quarantine proclamation will be held in quarantine at destination and inspected and tested at the owner's expense.

Official.—State veterinarian, Cheyenne.

Sheep.—Health certificates are required for all sheep shipped into Wyoming certifying freedom from scabies or necrobacillosis (lip-and-leg ulceration) or exposure thereto. Notice must be sent to the secretary, State board of sheep commissioners, Cheyenne, 10 days before shipment. All sheep must be dipped twice at destination within 15 days after arrival in a dip prescribed or recognized for scabies by the State board of sheep commissioners.

All sheep or bucks coming into the State for fattening and feeder purposes must come in under inspection by a State or Federal inspector and shall be held under quarantine until such time as they are ready to be shipped to market, at which time the quarantine will be raised and shipment allowed. If any of these sheep are to be held in the State for range purposes, they will be held subject to the import laws of the State requiring them to be dipped.

Who may inspect.—Federal or State inspectors.

Official.—Secretary-treasurer, State board of sheep commissioners, Cheyenne.

The first part of the paper is devoted to a general
discussion of the problem. It is shown that the
problem is of great importance in the theory of
the differential equations of the second order.
